The Rocket Lab Michael G. Smith, 2023-05-15 The Rocket Lab Maurice Zucrow, Purdue University and *America's Race to Space* focuses on the golden era of space exploration between 1946 and 1966, specifically the life and times of Purdue University's Dr. Maurice J. Zucrow, a pioneering teacher and researcher in aerospace engineering. Zucrow taught America's first university course in jet and rocket propulsion, wrote the field's first textbook, and established the country's first educational Rocket Lab. He was part of a small circle of innovators who transformed Purdue into the country's largest engineering university, which became a cradle of astronauts. Taking a chronological and thematic approach, *The Rocket Lab* weaves between the local and national drawing in rival universities, especially Harvard, MIT, Princeton, and Caltech. Also covered is Zucrow's role in the national project system of research and development through World War II and the Cold War. At Aerojet, he was one of the country's original project engineers, dedicated to scientific technical expertise and the stepwise approach. He made vanguard power plant contributions to the Northrop Flying Wing, as well as the Corporal, Nike, and Atlas missiles, among others. Zucrow's work in propulsion helped to improve the country's arsenal of ballistic missiles and space launchers, and as a teacher, he educated the first generation of aerospace engineers. This book elevates Zucrow and the central role he played in getting the United States to space.

A Research Strategy for Environmental, Health, and Safety Aspects of Engineered Nanomaterials National Research Council, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Board on Environmental Studies and Toxicology, Committee to Develop a Research Strategy for Environmental, Health, and Safety Aspects of Engineered Nanomaterials, 2012-06-09 The nanotechnology sector, which generated about 225 billion in product sales in 2009, is predicted to expand rapidly over the next decade with the development of new technologies that have new capabilities. The increasing production and use of engineered nanomaterials (ENMs) may lead to greater exposures of workers, consumers, and the environment, and the unique

scale specific and novel properties of the materials raise questions about their potential effects on human health and the environment Over the last decade government agencies academic institutions industry and others have conducted many assessments of the environmental health and safety EHS aspects of nanotechnology The results of those efforts have helped to direct research on the EHS aspects of ENMs However despite the progress in assessing research needs and despite the research that has been funded and conducted developers regulators and consumers of nanotechnology enabled products remain uncertain about the types and quantities of nanomaterials in commerce or in development their possible applications and their associated risks A Research Strategy for Environmental Health and Safety Aspects of Engineered Nanomaterials presents a strategic approach for developing the science and research infrastructure needed to address uncertainties regarding the potential EHS risks of ENMs The report summarizes the current state of the science and high priority data gaps on the potential EHS risks posed by ENMs and describes the fundamental tools and approaches needed to pursue an EHS risk research strategy The report also presents a proposed research agenda short term and long term research priorities and estimates of needed resources and concludes by focusing on implementation of the research strategy and evaluation of its progress elements that the committee considered integral to its charge
