UML for Database Design Eric J. Naiburg, Robert A. Maksimchuck, 2001 Typically analysis development and database teams work for different business units and use different design notations With UML and the Rational Unified Process RUP however they can unify their efforts eliminating time consuming error prone translations and accelerating software to market In this book two data modeling specialists from Rational Software Corporation show exactly how to model data with UML and RUP presenting proven processes and start to finish case studies The book utilizes a running case study to bring together the entire process of data modeling with UML Each chapter dissects a different stage of the data modeling process from requirements through implementation For each stage the authors cover workflow and participants roles key concepts proven approach practical design techniques and more Along the way the authors demonstrate how integrating data modeling into a unified software design process not only saves time and money but gives all team members a far clearer understanding of the impact of potential changes The book includes a detailed glossary as well as appendices that present essential Use Case Models and descriptions For all software team members managers team leaders systems and data analysts architects developers database designers and others involved in building database applications for the enterprise

abstract For many years universities colleges have used file based manual system to manage library use Whereas this was quite efficient for some time due to the expansion of the library and increase in the number of students the system wastes a lot of time especially when searching for a particular book or resource In response to this problem more librarians have been added employed and this has escalated the cost of managing the library This inefficiency led to the study that was aimed at automating the book keeping function of the library A study was carried out at Kampala International University Dar salaam Campus and it was discovered that the manual system had inefficiencies ranging from time wastage high cost of operation in terms of human resources long search time data redundancy among others A computer based library management system was developed using visual studio The new system allows the user to add books into the system search for books from the system database track member information manage borrowing among others By automating library operations the university

Integrated Library Management Systems Hilal Ahmad, 2016 The selection of an appropriate integrated library management system for automating libraries has been a challenging task for Indian librarians Even though a number of indigenous library management softwares were developed only those compatible with international standards survived The implementation of integrated library management systems demands a widespread training of librarians for systematic change in their work environment This book gives a detailed description of library automation both at Indigenous and global level from its traditional to modern period It sheds light on the present picture of automated library system of college and university libraries in India Apart from highlighting the different modules of various popular library management systems and the user satisfaction with these automated systems this book also brings into focus the technical expertise of Indian librarians in managing these integrated library management systems Since an effort has been made to highlight the pros and cons of these systems and the issues faced by the Indian librarians in automating libraries it is anticipated that this book will serve as a tool for university and college librarians in selecting the integrated library management system that will suit their requirements for effective and efficient automation of their operations and services Subject Library Science
