1. How does energy move through an ecosystem? It moves in one direction.
2. What is the original source of all energy? The sun
3. Describe a food chain and a food web.
A food chain shows the energy moving through an ecosystem as organisms consume food to obtain the energy. A food web shows all of the possible food chains in an ecosystem.
4. What does the shape of an energy pyramid indicate about the energy of an ecosystem?
The most energy is available in the producer's level which is the base of the pyramid.
The energy available reduces as you move up the pyramid which would be as you move from producers to consumers.
5. How much energy is available for the next trophic level of an energy pyramid?
Only 10% of the energy of a trophic level is available for the next trophic level.
6. Why energy is lost between trophic levels?
90% of the energy in a trophic level is used by the organism for living processes such as growth, movement, reproduction, etc.
7. Why does the number of organisms decrease as you move up the pyramid?
The organisms become larger therefore require more energy. It becomes harder to fulfill the energy requirements so the populations are not as large.
8. Describe the predator/prey relationship. Predators must hunt/chase their food source. The prey is the organism being hunted. This relationship requires the prey to have at least the amount of stored energy that is equal to the amount of energy expended by the predator to catch the prey.
9. How much energy must be available from the prey to the predator to make the chase beneficial? The prey to have at least the amount of stored energy that is equal to the amount of energy expended by the predator to catch the prey.
10. Why does a bear hibernate? It reduces the amount of energy required when the food source of a bear is reduced during the winter months.
11. Why do birds fly south in the winter? The amount of food found at the new destination is worth the long trip. It also provides a safe nesting ground.
12. Describe the energy used to grow food in the United States compared to other countries. The United States uses more fossil fuel energy to grow food while other countries use more human/animal energy to grow food.
13. What is a factory farm? A factory farm is where a large number of animals are raised and fattened indoors or in large feedlots to be used as a food source.
14. Describe the nitrogen cycle. The nitrogen cycle describes the movement of nitrogen from the atmosphere to the ground to be used and then returned back to the
