

2 Section 7.2

Proposition 2.1. *10. Show that in Hölder's Inequality there is equality if and only if there are constants α and β , not both zero, for which*

$$\alpha \cdot |f|^p = \beta \cdot |g|^q \text{ a.e. on } E.$$

Proof. Suppose there exists α and β satisfy the condition. Without loss of generality, assume $\beta \neq 0$. Then

$$\begin{aligned} \int_E |f \cdot g| &= \int_E |f| \cdot \left(\frac{\alpha |f|^p}{\beta} \right)^{1/q} \\ &= \int_E |f|^p \cdot \left(\frac{\alpha}{\beta} \right)^{1/q} \\ &= \left(\int_E |f|^p \right)^{1/p} \left(\frac{\alpha}{\beta} \int_E |f|^p \right)^{1/q} \\ &= \left(\int_E |f|^p \right)^{1/p} \left(\int_E |g|^q \right)^{1/q} \\ &= \|f\|_p \cdot \|g\|_q \end{aligned}$$

If f or g is 0 the converse holds by setting β or α to 0. Now suppose f and g are both nonzero and assume

$$\int_E |f \cdot g| = \|f\|_p \cdot \|g\|_q$$

We can rearrange this expression to obtain

$$\int_E \left(\left(\frac{|f|}{\|f\|_p} \right)^p \cdot \frac{1}{p} + \left(\frac{|g|}{\|g\|_q} \right)^q \cdot \frac{1}{q} - \frac{|f|}{\|f\|_p} \cdot \frac{|g|}{\|g\|_q} \right) = 0$$

By Young's Inequality, the integrand is non-negative, so we have

$$\left(\frac{|f|}{\|f\|_p} \right)^p \cdot \frac{1}{p} + \left(\frac{|g|}{\|g\|_q} \right)^q \cdot \frac{1}{q} = \frac{|f|}{\|f\|_p} \cdot \frac{|g|}{\|g\|_q}$$

a.e. on E , which implies

$$\left(\frac{|f|}{\|f\|_p} \right)^p = \left(\frac{|g|}{\|g\|_q} \right)^q$$

a.e. on E , so we have $\alpha \cdot |f|^p = \beta \cdot |g|^q$ a.e. on E , where $\alpha = 1/\|f\|_p^p$ and $\beta = \|g\|_q^q$. \square

Proposition 2.2. *18. Assume $m(E) < \infty$. For $f \in L^\infty(E)$, show that $\lim_{p \rightarrow \infty} \|f\|_p = \|f\|_\infty$*

Theory of Stochastic Integrals Jorge A. Benedetto, 2019-03-05 The theory of complex dynamics in one variable initiated by Fatou and Julia in the early twentieth century concerns the iteration of a rational function acting on the Riemann sphere Building on foundational investigations of p adic dynamics in the late twentieth century dynamics in one non archimedean variable is the analogous theory over non archimedean fields rather than over the complex numbers It is also an essential component of the number theoretic study of arithmetic dynamics This textbook presents the fundamentals of non archimedean dynamics including a unified exposition of Rivera Letelier s classification theorem as well as results on wandering domains repelling periodic points and equilibrium measures The Berkovich projective line which is the appropriate setting for the associated Fatou and Julia sets is developed from the ground up as are relevant results in non archimedean analysis The presentation is accessible to graduate students with only first year courses in algebra and analysis under their belts although some previous exposure to non archimedean fields such as the p adic numbers is recommended The book should also be a useful reference for more advanced students and researchers in arithmetic and non archimedean dynamics **Introduction to Real Analysis** William C. Bauldry, 2011-09-09 An accessible introduction to real analysis and its connection to elementary calculus Bridging the gap between the development and history of real analysis Introduction to Real Analysis An Educational Approach presents a comprehensive introduction to real analysis while also offering a survey of the field With its balance of historical background key calculus methods and hands on applications this book provides readers with a solid foundation and fundamental understanding of real analysis The book begins with an outline of basic calculus including a close examination of problems illustrating links and potential difficulties Next a fluid introduction to real analysis is presented guiding readers through the basic topology of real numbers limits integration and a series of functions in natural progression The book moves on to analysis with more rigorous investigations and the topology of the line is presented along with a discussion of limits and continuity that includes unusual examples in order to direct readers thinking beyond intuitive reasoning and on to more complex understanding The dichotomy of pointwise and uniform convergence is then addressed and is followed by differentiation and integration Riemann Stieltjes integrals and the Lebesgue measure are also introduced to broaden the presented perspective The book concludes with a collection of advanced topics that are connected to elementary calculus such as modeling with logistic functions numerical quadrature Fourier series and special functions

Detailed appendices outline key definitions and theorems in elementary calculus and also present additional proofs, projects and sets in real analysis. Each chapter references historical sources on real analysis while also providing proof-oriented exercises and examples that facilitate the development of computational skills. In addition, an extensive bibliography provides additional resources on the topic.

Introduction to Real Analysis: An Educational Approach is an ideal book for upper undergraduate and graduate level real analysis courses in the areas of mathematics and education. It is also a valuable reference for educators in the field of applied mathematics.

Stochastic Integration with Jumps Klaus Bichteler, 2002-05-13. The complete theory of stochastic differential equations driven by jumps, their stability and numerical approximation theories.

Basic Partial Differential Equations David. Bleecker, 2018-01-18. Methods of solution for partial differential equations (PDEs) used in mathematics, science and engineering are clarified in this self-contained source. The reader will learn how to use PDEs to predict system behaviour from an initial state of the system and from external influences and enhance the success of endeavours involving reasonably smooth, predictable changes of measurable quantities. This text enables the reader to not only find solutions of many PDEs but also to interpret and use these solutions. It offers 6000 exercises ranging from routine to challenging. The palatable, motivated proofs enhance understanding and retention of the material. Topics not usually found in books at this level include but are examined in this text: the application of linear and nonlinear first order PDEs to the evolution of population densities and to traffic shocks; convergence of numerical solutions of PDEs and implementation on a computer; convergence of Laplace series on spheres; quantum mechanics of the hydrogen atom; solving PDEs on manifolds. The text requires some knowledge of calculus but none on differential equations or linear algebra.
