Contemporary Robotics Aleksandar Rodic, 2009-12-01 This book is a collection of 18 chapters written by internationally recognized experts and well known professionals of the field. Chapters contribute to diverse facets of contemporary robotics and autonomous systems. The volume is organized in four thematic parts according to the main subjects regarding the recent advances in the contemporary robotics. The first thematic topics of the book are devoted to the theoretical issues. This includes development of algorithms for automatic trajectory generation using redundancy resolution scheme, intelligent algorithms for robotic grasping, modelling approach for reactive mode handling of flexible manufacturing and design of an advanced controller for robot manipulators. The second part of the book deals with different aspects of robot calibration and sensing. This includes a geometric and threshold calibration of a multiple robotic line vision system, robot based inline 2D/3D quality monitoring using picture giving and laser triangulation and a study on prospective polymer composite materials for flexible tactile sensors. The third part addresses issues of mobile robots and multi agent systems including SLAM of mobile robots based on fusion of odometry and visual data, configuration of a localization system by a team of mobile robots, development of generic real time motion controller for differential mobile robots, control of fuel cells of mobile robots, modelling of omni directional wheeled based robots, building of hunter hybrid tracking environment as well as design of a cooperative control in distributed population based multi agent approach. The fourth part presents recent approaches and results in humanoid and bioinspirative robotics. It deals with design of adaptive control of anthropomorphic biped gait, building of dynamic based simulation for humanoid robot walking, building controller for perceptual motor control dynamics of humans and biomimetic approach to control mechatronic structure using smart materials.

Embedded Systems Handbook Richard Zurawski, 2018-09-03 Considered a standard industry resource, the *Embedded Systems Handbook* provided researchers and technicians with the authoritative information needed to launch a wealth of diverse applications including those in automotive electronics, industrial automated systems and building automation and control. Now a new resource is required to report on current developments and provide a technical reference for those looking to move the field forward yet again. Divided into two volumes to accommodate this growth, the *Embedded Systems Handbook Second Edition* presents a comprehensive view on this area of computer engineering with a currently appropriate emphasis on developments in networking and applications. Those experts directly involved in the creation and evolution of the ideas and technologies presented offer tutorials, research surveys and technology overviews that explore cutting edge developments and deployments and identify potential trends. This first self contained volume of the handbook, *Embedded Systems Design and Verification*, is divided into three sections. It begins with a brief introduction to embedded systems design and verification. It then provides a comprehensive overview of embedded processors and various aspects of system on chip and FPGA as well as solutions to design challenges. The final section explores power aware embedded computing design issues specific to secure
