

G-VI (650) MAINTENANCE REQUIREMENTS

This approved inspection program identifies all aircraft equipment required for RVSM, together with scheduled maintenance requirements for that equipment. The aircraft manufacturer identifies this equipment in The Aircraft Flight Manual and these items are also listed in Appendix 4 of this manual. Chapters 5 and 34 of the Aircraft Maintenance Manual, outline the maintenance requirements for RVSM equipment.

To retain approval of RVSM category aircraft it is necessary to accomplish the following inspection:

1. GVI (650) Maintenance Manual 05-20-00: Scheduled maintenance checks, explains the manufacture's maintenance program schedule format.
2. GVI (650) Maintenance Manual 05-20-00, page 41 Table 25: 24 Month Scheduled Maintenance Table. Provides the list of RVSM equipment checked on a 24 month cycle.
3. GVI (650) Maintenance Manual 34-13-00: Air Data System – Functional / Leak Test. This Procedure allows for recertification of an Air Data System (ADS) probe while installed on aircraft. This procedure meets the requirements of Federal Aviation Regulations (FARS) 91.411 and Part 43 (Appendix E).

Gray Matter Denny Pollard, 2012-03-22 To be completely frank about it I'm increasingly aware that there are as many gray areas in aviation as there are black and white ones and I'm beginning to feel as if I know less and less about what I do I'm a trained and reasonably experienced A/P mechanic and I'm supposed to know this airplane stuff but my experiences are often contradictory to what I know are theoretical facts It's frustrating and sometimes I think I knew more back when I knew less Or at least I thought I did To keep an aircraft in peak operating condition aircraft mechanics and service technicians perform scheduled maintenance to make repairs and complete inspections required by the Federal Aviation Administration FAA Many aircraft mechanics specialize in preventive maintenance They inspect engines landing gear instruments pressurized sections accessories brakes valves pumps and air conditioning systems for example and other parts of the aircraft and do the necessary maintenance and replacement of parts Inspections take place following a schedule based on the number of hours the aircraft has flown calendar days cycles of operation or a combination of these factors To examine an engine aircraft mechanics work through specially designed openings while standing on ladders or scaffolds or use hoists or lifts to remove the entire engine from the craft After taking an engine apart mechanics use precision instruments to measure parts for wear and use x-ray and magnetic inspection equipment to check for invisible cracks Worn or defective parts are repaired or replaced They may also repair sheet metal or composite surfaces measure the tension of control cables and check for corrosion distortion and cracks in the fuselage wings and tail After completing all repairs mechanics must test the equipment to ensure that it works properly
