Abstract—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The subjects were 15 obese women who were randomly assigned to either a control group or an experimental group. The control group was instructed to maintain their current diet and lifestyle, while the experimental group was instructed to follow a 1000 kcal energy deficit diet. The subjects were assessed at baseline and at 10 weeks. The experimental group showed a significant decrease in body weight, body fat percentage, and waist circumference, while the control group showed no significant changes. The experimental group also showed a significant increase in physical fitness, as measured by the 6-minute walk test. The results of this study suggest that a 10-week, 1000 kcal energy deficit diet can effectively reduce body weight, body fat percentage, and waist circumference, and improve physical fitness in obese women.
