

Example Conclusion

There can be no doubt that Ken Kesey's detailed, honest and scathing characterisation of Nurse Ratched and R.P. McMurphy is a criticism of society's treatment of mental illness during the 1950s. Nurse Ratched's desire for order seeks to manipulate her patients and staff in order to gain complete power. As the novel unfolds we begin to understand that she is simply the human face for society. She is part of the system that ultimately seeks to control everyone. McMurphy's unlikely Christ-like character represents salvation and freedom. Their relationship is confrontational from the beginning because they recognise the power they each have. Kesey's final message is a warning to us all about being complacent and passive in our lives. He wants to show us that we need to have courage to live our lives in spite of how difficult things may become.

Argument Evaluation and Evidence Douglas Walton, 2015-08-04 This monograph poses a series of key problems of evidential reasoning and argumentation. It then offers solutions achieved by applying recently developed computational models of argumentation made available in artificial intelligence. Each problem is posed in such a way that the solution is easily understood. The book progresses from confronting these problems and offering solutions to them, building a useful general method for evaluating arguments along the way. It provides a hands-on survey explaining to the reader how to use current argumentation methods and concepts that are increasingly being implemented in more precise ways for the application of software tools in computational argumentation systems. It shows how the use of these tools and methods requires a new approach to the concepts of knowledge and explanation suitable for diverse settings such as issues of public safety and health, debate, legal argumentation, forensic evidence, science education, and the use of expert opinion evidence in personal and public deliberations.

From Research to Manuscript Michael Jay Katz,2009-01-21 Observations Plus Recipes It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to

lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers *Technical Writing, Presentational Skills, and Online Communication: Professional Tools and Insights* Greenlaw, Raymond, 2012-03-31 This book is a collection of work to assist any professional who needs to deal with ethical issues write up a technical project give or develop a presentation or write material for an online audience Provided by publisher
