Abstract

The problem of determining the effectiveness of scientific research carried out by teachers of universities is considered. In particular, the results of the publishing activity of teachers are investigated. For the comparative analysis of teachers' effectiveness, it is offered to formalize this problem in a class of problems of multicriteria optimization and to apply methods of a multiattribute choice of variants. Approaches to aggregating the effectiveness of teachers' team and justifying the advantage of choosing the most productive teams over less productive ones are also proposed. The problems of determining the most effective teacher and the most effective team of teachers are given.

Keywords

Scientific activity of universities, teacher effectiveness, multicriteria optimization, weight coefficients, teacher ranking, aggregation of teachers' team effectiveness, the most effective teacher.

1. Introduction

Higher education plays an important role in the development of domestic science. In all developed countries, university science is the main factor in the development of science and is gradually becoming a powerful innovative factor not only in higher education but also in the development of the entire education system in Ukraine.

It is known that science is the most effective area of investment. It is estimated that the return on investment in science can be 500 percent or more [1, 2]. The effectiveness of scientific work in universities is assessed by various criteria. There are publications, indexes of citations of scientific papers, the novelty of scientific developments, conformity of the teacher publications to the disciplines that he teaches, and so on. It should be noted that both scientific and teaching activities are obviously poorly structured subject areas. For research of such areas, it is expedient, in particular, to apply methods of expert estimation and the theory of decision-making.

We can conclude on many grounds, that in recent decades, science, including science in our country, is gradually moving to universities. The importance of intensifying research in universities and stimulating the development of science by university teachers is due to a number of factors [3, 4]:

- almost 70% of doctors of sciences and more than 70% of candidates of sciences work in the system of higher education in Ukraine;
- more than 80% of postdoctorate and PhD students carry out their training at universities;
- high quality of education, the formation of adequate content of academic disciplines, modernization of practical and laboratory work can be fully ensured only through the use of relevant scientific advances;
- PhD thesis and Doctor of Science dissertation of teachers should be based on new knowledge and be the result of scientific activity;

Scientific Research Effectiveness J. Hurley, 2012-12-06 Baruch S Blumberg NASA Astrobiology Institute Ames Research Center Moffett Field CA USA Scientific research is one of the major human enterprises Many governments are convinced that research and its products provide the means to enrich an economic life that is no longer sustained by traditional manufacturing and service industries The public has a high expectation of medical research and many are convinced that with the expenditure of sufficient money all human diseases can be conquered they look forward to a long and disease free life There is also a great interest in many sectors of society to understand nature not only in order to control it or learn how best to cope with its uncertainties but to accumulate knowledge for its own sake Finally scientific research contributes significantly to the intellectual stores of humanity and provides an important process to explore the most profound questions of life Modern science is rarely a solitary occupation It requires heavy investments in equipment supplies buildings and field capabilities Scientists need a band of fellow explorers with whom to share the adventure discuss experiments and results and perhaps most importantly enable the testing and retesting of their hypotheses by themselves and by others This was certainly the case in my own research which led eventually to the discovery of the Hepatitis B virus and later to the vaccine for it Scientific training is very specialized whereas the solutions to problems transcend narrow disciplinary borders

Evaluating Research Efficiency in the U.S. Environmental Protection Agency National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, Committee on Evaluating the Efficiency of Research and Development Programs at the U.S. Environmental Protection Agency, 2008-06-17 A new book from the National Research Council recommends changes in how the federal government evaluates the efficiency of research at EPA and other agencies Assessing efficiency should be considered only one part of gauging a program's quality relevance and effectiveness The efficiency of research processes and that of investments should be evaluated using different approaches Investment efficiency should examine whether an agency's R D portfolio including the budget is relevant of high quality matches the agency's strategic plan These evaluations require panels of experts In contrast process efficiency should focus on inputs the people funds and facilities dedicated to research and outputs the services grants publications monitoring and new techniques produced by research as well as their timelines and should be evaluated using quantitative measures The committee recommends that the efficiency of EPA's research programs be evaluated according to the same standards used at other agencies To ensure this OMB should train and oversee its budget examiners so that the PART questionnaire is implemented consistently and equitably across agencies

The Strength in Numbers Barry Bozeman, Jan Youtie, 2017-10-23 Once upon a time it was the lone scientist who achieved brilliant breakthroughs No longer Today science is done in teams of as many as hundreds of researchers who may be scattered across continents and represent a range of hierarchies These collaborations can be powerful but they demand new ways of thinking about scientific research When three hundred people make a discovery who gets credit How can all collaborators concerns be adequately addressed Why do certain STEM collaborations succeed while others fail Focusing on the nascent science of team science The Strength in Numbers synthesizes the results of the most far reaching study to date on collaboration among university scientists to provide answers to such questions Drawing on a national survey with responses from researchers at more than one hundred universities anonymous web posts archival data and extensive interviews with active scientists and engineers in over a dozen STEM disciplines Barry Bozeman and Jan Youtie set out a framework to characterize different types of collaboration and their likely outcomes They also develop a model to define research effectiveness which assesses factors internal and external to collaborations They advance what they have found to be the gold standard of science collaborations consultative collaboration management This strategy which codifies methods of consulting all team members on a study s key points and incorporates their preferences and values empowers managers of STEM collaborations to optimize the likelihood of their effectiveness The Strength in Numbers is a milestone in the science of team science and an indispensable guide for scientists interested in maximizing collaborative success

Dissemination and Implementation Research in Health Ross C. Brownson, 2018 The definitive work in D I research now completely updated and expanded The application of scientific research to the creation of evidence based policies is a science unto itself and one that is never easy Dissemination and implementation research D I is the study of how scientific advances can be implemented into everyday life and understanding how it works has never been more important for students and professionals across the scientific academic and governmental communities Dissemination and Implementation Research in Health is a practical guide to making research more consequential a collection assembled and written by today s leading D I researchers Readers of this book are taught to Evaluate the evidence base in an effective intervention Choose a strategy that produces the greatest impact Design an appropriate and effectual study Track essential outcomes Account for the barriers to uptake in communities social service agencies and health care facilities The challenges to moving research into practice are universal and they re complicated by

the current landscape's reliance on partnerships and multi-center research. In this light, Dissemination and Implementation Research in Health is nothing less than a roadmap to effecting change in the sciences. It will have broad utility to researchers and practitioners in epidemiology, biostatistics, behavioral science, economics, medicine, social work, psychology, and anthropology both today and in our slightly better future. **Tomorrow's Agriculture** Peters, Prabhu Pingali, 2018-04-17

This title was first published in 2002. This volume represents some of the proceedings of the 24th conference of the International Association of Agricultural Economists (IAAE) held in Berlin, Germany, in August 2000. The papers in this volume include the president's address, the Elmhirst Lecture, and a selection of 20 contributed papers. It also includes panel discussion reports, reports on the discussion groups, and mini-symposia, poster paper abstracts, and the synoptic view presented at the close of the conference by the new president of the IAAE, Joachin von Braun. The theme of the 24th conference was Tomorrow's Agriculture: Incentives, Institutions, Infrastructure, and Innovations, reflecting the rapid advances being made in the application of biotechnology in both the developed and developing worlds. **High-Quality Knowledge**
