Global Ecology and Oceanography of Harmful Algal Blooms

Patricia M. Glibert, Elisa Berdalet, Michele A. Burford, Grant C. Pitcher, Mingjiang Zhou, 2018-04-26. Harmful algal blooms (HABs) that cause fish kills, contaminate seafood with toxins, or cause human or ecological health impacts and harm to local economies are occurring more often in more places and lasting longer than in past decades. This expansion is primarily the result of human activities through increased nutrient inputs and various aspects of climate change. The Global Ecology and Oceanography of Harmful Algal Blooms (GEOHAB) programme promoted international collaboration to understand HAB population dynamics in various oceanographic regimes and to improve the prediction of HABs. This volume introduces readers to the overarching framework of the GEOHAB programme, factors contributing to the global expansion of harmful algal blooms, the complexities of HABs in different habitats, and the forward-looking issues to be tackled by the next generation of GEOHAB. GlobalHAB: The programme brought together an international team of contributing scientists and ecosystem managers, and its outcomes will greatly benefit the international research community.

Bower,Artur Ionescu,Mattia Pistone,Sami Mikhail,Dawn Cardace,2021-01-04 **Colour and Light in the Ocean, volume II** Shubha Sathyendranath,Gemma Kulk,Astrid Bracher,Jamie Shutler,Victor Martinez-Vicente,Tiit Kutser,Javier A. Concha,Marie-Helene Rio ,Heather Bouman,2024-11-12 Marine ecosystems are open and dissipative systems that rely on an external energy source light for their sustenance The magnitude of the light flux and the spectral quality of the light field which determines colour determine the rate of marine photosynthesis by phytoplankton in the ocean and the types of

phytoplankton communities that flourish in different parts of the ocean and in different seasons Ocean colour determined by the spectral quality of light scattered out of the sea and back into the atmosphere can be monitored using satellite sensors and used to map the distribution of the major phytoplankton pigment chlorophyll a at global scales Remote sensing of ocean colour first realised in 1977 has revolutionised the field of biological oceanography Over the years the quality of satellite products has continued to improve and the range of products available has extended beyond chlorophyll concentration to encompass many variables of interest to biological oceanography and ocean biogeochemistry However it is well recognized that satellite observations have to be integrated with and complemented by field measurements and modelling to obtain the full picture The research topic proposed will cover a range of recent developments in ocean colour remote sensing and allied fields

Volume 2: Marine Ecology Juan M. Molina, Gabriela E. Blasina, 2025-04-17 Marine systems face a multitude of anthropogenic stressors such as climate change recreational and commercial fishing aquaculture practices pollution and coastal urbanization These stressors exert escalating pressure on marine ecosystems leading to noticeable changes in habitat conditions as well as alterations in the abundance and diversity of their communities Understanding the impacts of these stressors proves challenging due to their interactions with various factors such as species richness environmental fluctuations system openness stressor tolerance and the occurrence rate and intensity of each stressor Therefore a comprehensive analysis of the entire ecosystem is crucial It is essential to consider the unique characteristics of each marine environment when assessing the cumulative stress that affects them This book provides insights into the functioning of marine ecosystems and their responses to both natural and human induced drivers within the framework of sustainable marine resource utilization This book will make a valuable contribution to the scientific community serving as a resource to inform decision makers and the general public about the current state of knowledge regarding the

marine environment and the human footprints on our seas
