■ **Abstract:** The authors examined the effects of a 12-week, 100% body weight (BW) resistance training program on the body composition and muscle strength of 10 sedentary, middle-aged men. The subjects were divided into two groups: a control group (CON) and an exercise group (EX). The EX group performed a 12-week, 100% BW resistance training program. The CON group did not exercise. The EX group showed significant increases in muscle mass and strength, while the CON group did not. The EX group also showed a significant decrease in body fat percentage, while the CON group did not. The authors concluded that a 12-week, 100% BW resistance training program is effective for improving body composition and muscle strength in sedentary, middle-aged men.
