Post Tension Raft Foundation:

Design Applications of Raft Foundations J. A. Hemsley, 2000 This book examines alternative design procedures for plain and piled raft foundations It explores the assumptions that are made in the analysis of soil structure interaction together with the associated calculation methods The book gives many examples of project applications covering a wide range of structural forms and ground conditions

Post-tensioning in Buildings fib Fédération internationale du béton, 2005-01-01 The development of prestressing technology has constituted one of the more important improvements in the fields of structural engineering and construction Referring particularly to post tensioning applications it is generally recognized how it opens the possibility to improve economy structural behaviour and aesthetic aspects in concrete solutions In spite of the simplicity of its basic concepts and well known advantages the application extent of post tensioning solutions cannot be considered harmonized in the different areas and structural applications In fact for various reasons it appears that the potential offered by prestressing is far from being fully exploited especially in building structures field In many cases where post tensioning would provide a visibly superior solution it happens after all that a more conventional non prestressed solution is often selected The main objective of this fib Technical Report is therefore to show the benefits of using post tensioning for the more common practical applications in concrete buildings The document is mainly addressed to architects contractors and owners It is also drafted with the goal of motivating building designers to use post tensioning basic design aspects related to prestressing effects and design criteria are summarized and conceptual design aspects are emphasized A set of practical examples is presented showing the adopted solutions and their advantages when meeting the requirements of specific problems The selected examples were precisely not chosen because they are outstanding structures As a matter of fact post tensioning principles and technology can be used in any structure independently of its importance covering a wide range of building structural applications improving the structure quality and promoting concrete as a structural material The advantages of using post tensioning concerning structural behaviour economy detailing and constructive aspects are illustrated by the presentation of several existing structures most of them designed by Working Party members General design calculations are not presented but design results showing the improvement in structural behaviour are illustrated
