

O Level Human and Social Biology (5096)

How many lessons per week will I need to cover the syllabus?

This partly depends on what your students have done before they begin their O Level course. If they have been in your Centre for some years beforehand, then you may have been able to begin building up their knowledge and skills already. If they come to you from many different backgrounds, then you may need to do more work with them to prepare them for O Level. As a rough guideline, many Centres teach their O Level Human and Social Biology students for about 2 hours 30 minutes per week over a 2-year period, but it is not unusual for the time allocated to be significantly more or less than this. You should try to have one relatively long session each week, so that your students can carry out practical work.

There is no Practical paper, so my students don't need any laboratory experience, do they?

Yes, they do need to have some laboratory experience. The theory paper contains questions that are about practical work and set in practical contexts. The syllabus makes it clear, in the Aims, in both Assessment Objectives A and B, in the Scheme of Assessment and in the Subject Content, that the course should have a practical component and that candidates should have some experience of doing (as well as seeing) experimental work. The questions in the theory paper will assess practical skills, including both data handling and familiarity with standard laboratory equipment. Any candidates without experience of doing practical work will be disadvantaged in this paper.

The Subject Content listing in the syllabus identifies suggestions for practical work with an *. Using practical work as a teaching tool gives students the opportunity to learn by hands-on doing. Practical work is thus an excellent way of enabling candidates to build an understanding of specific theoretical perspectives of Human and Social Biology. A Human and Social Biology qualification without any practical component at all would be a second-rate assessment of the subject, and CIE aims to provide valid qualifications acceptable in all areas of the world.

What equipment should we have in our laboratories?

Much useful information is given in Cambridge International Examination's booklet *Planning for Practical Science in Secondary Schools*, (New Edition June 2002) available free from our publications department. In order to fulfil the practical suggestions in the O Level Human and Social Biology syllabus the following equipment and materials could be used:

- Access to a microscope sufficient to see plant and animal cells (1h)
- Visking (dialysis) tubing) (onion epidermis (needs a microscope) or citrus fruit cells are suggested as alternatives) (1j)
- Benedict's reagent, iodine in potassium iodide solution (often termed iodine solution), biuret reagent (or 1 mol dm^{-3} sodium hydroxide solution and 0.5 mol dm^{-3} copper sulphate solution), absorbent paper suitable for the grease spot test (3a)
- Disclosing tablets to show bacteria on teeth (diluted food colouring may work if these are not available) (4c)
- Amylase enzyme (diastase will work well and is cheap), starch suspension (made fresh by boiling starch in water and filtering to remove starch grains), iodine solution (see above), source of heat (e.g. bunsen burner or gas ring or hot plate), 1 mol dm^{-3} sodium hydroxide solution and 1 mol dm^{-3} hydrochloric acid solution (to be added 1 drop at a time to change pH), universal indicator paper or liquid with colour chart to measure pH (4e)
- Lime water or bicarbonate indicator (6f)
- Large bowl of water, smaller bowl and plastic tube (6g)
- Filter pump to connect to tap, to draw on lit cigarette, cotton wool to absorb tar, universal indicator paper or liquid to measure pH (6g)
- Human skeleton or model of skeleton; human, animal or model joint (articulated skeleton hanging from a hook is best, but a bag of bones is useful) (7g)
- Sharp knife to cut up kidney (8b) cow, sheep or goat eye (9c)
- Piece of board with pins stuck in it, so the pin heads (blunt end) can be gently rested on skin (9b)
- Long (metre) ruler for dropping for reaction time testing (9n)

Keshavan,2015-06-09 Human beings evolved in the company of others and flourish in proportion to their positive social ties

To understand the human brain we must situate its biology in the wider context of society To understand society we must also consider how the brains and minds of individuals shape interactions with other human beings Social Neuroscience offers a comprehensive new framework for studying the brain human development and human behavior In this book leading researchers in the fields of neurobiology psychiatry psychology and sociology elucidate the connections between brain biology and the brain s functioning in the social world providing a state of the art interdisciplinary explanation of how humans think and act as well as the ways we define and treat pathological behavior Synthesizing the insights and perspectives of these experts Social Neuroscience examines how neural processes make the brain sensitive to social experience how cognition shapes social behavior and how social networks create a range of responses among different individuals to the same environmental stimuli The mutually reinforcing connections between brain mind and society have profound implications for human health from the emotionally damaging effects of severe social deprivation to the neurological impact of parental abuse and neighborhood violence The authors explore these connections with special focus on mental illnesses including schizophrenia a disorder characterized by marked social deficits in which a neurological basis is now well established

Bibliography ,1981 **Levels of Organic Life and the Human** Helmuth Plessner,2021-05-20 The groundbreaking classic of twentieth century German philosophy now available in English with an introduction by J M Bernstein Helmuth Plessner s

Levels of Organic Life and the Human draws on phenomenological biological and social scientific sources to offer a systematic account of nature life and human existence The book considers non living nature plants non human animals and human beings a sequence of increasingly complex modes of boundary dynamics simply put interactions between a thing s insides and the surrounding world Living things are classed and analyzed by their positionality or orientation to and within an environment According to Plessner s radical view the human form of life is excentric that is the relation between body and environment is something to which humans themselves are positioned and can take a position This excentric positionality enables human beings to take a stand outside the boundaries of their own body a possibility with significant implications for knowledge culture religion and technology A powerful and sophisticated account of embodiment the Levels shows with reference both to science and to philosophy how life can be seen on its own terms to establish its own boundaries and how from the standpoint of life the human establishes itself in relation to the nonhuman As such the book is not merely a historical monument but a source for invigorating a range of vital current conversations around the animal posthumanism the material turn and the biology and sociology of cognition

Neuroscience Notes Stephen Gislason MD,2018-03-14 In this book I have selected topics that are representative of neuroscience inquiry retaining brief references to a larger context that includes the study of neurology anthropology paleontology computer science and philosophy There have been several attempts to develop a theory of brain function that incorporates a large collection of observations experimental results and a growing understanding of the innate features of human nature I doubt that a single theory is feasible and suggest that the goal is integration of knowledge from diverse disciplines into a comprehensive understanding of who we are and why we are the way we are

Marx and Education in Late Capitalism R. F. Price,1986-01-01 The major premise of this book is that efforts to construct a Marxist analysis of education centered on schools and schooling are misdirected Instead the author contends that explorations of education must more importantly focus on the valuable learning experiences that occur outside the classroom Using Marx s own writings as a guide to interpreting past and present events the author explores how education should be conceptualized in order to liberate working people He identifies those aspects of education linked with the specifically capitalist nature of our societies and those that give hope of the cooperative responsible society that Marx anticipated

Morality: A Natural History Roger V. Moseley,2019-10-17 What is morality and what is the source of our moral ideas Philosophers have explored these questions for centuries suggesting that both emotion and reason

play roles but failing to explain how and why Homo sapiens developed these ideas Author Roger Moseley argues that evolutionary forces that optimize human welfare provide the missing explanation *Morality A Natural History* presents a multi disciplinary analysis of the topic and reveals a common thread among the seemingly diverse fields of religion neuroscience experimental psychology and game theory child development evolution and animal behavior and anthropology and sociology When humans first appeared a simple self interested survival morality sufficed As societies became more complex however rules of behavior became necessary to limit conflict and promote cooperation The brain evolved producing language that allowed the articulation of moral ideas which were codified and enforced by religion and social forces No species lasts forever and it is at our peril today that we neglect those evolved moral values of cooperation altruism truthfulness and empathy Rooted in scientific evidence and interspersed with personal anecdotes and humorous observations Moseley provides a unique perspective on the natural history of morality how it appeared evolved and continues to evolve today *Morality A Natural History* is essential reading for academics and laypersons alike who seek to understand the origin and essence of human morality **Botswana Notes and Records** ,1985 **BIOS Instant Notes in Cognitive Psychology** Jackie Andrade,Jon May,2004-01-01 *Instant Notes in Cognitive Psychology* is a concise summary of the key theoretical and empirical topics in cognitive psychology providing easy access to the core information in the field The book can serve as a core text supplemented by readings in the original literature as a reference guide for students and lecturers alike or as an ideal revision guide prior to exams *Instant Notes in Cognitive Psychology* is intended primarily for students taking a first course in the subject but can also be used as an introduction to the field for undergraduates and graduates from other subject areas *From Birth to Death* William Petersen,2017-07-05 *From Birth to Death* is a detailed analysis of how population statistics are collected in the United States particularly by the Bureau of the Census It describes the errors and other flaws typically found in such data Petersen sets out the fundamentals of demography and reviews the current proposal to use sampling in the census He then reviews examples of how ignoring age and sex structure leads to false conclusions Petersen explores race and ethnicity and the dilemmas inherent in the necessarily ambiguous definitions of these categories He also analyzes the problems of women who postpone having children to ages when risks of failure become significant The author also reviews the two most prominent population theories Malthus and the fertility transition and questions why predictions of future population size are often completely wrong The final chapter discusses the pros and cons of state intervention in the control of fertility and efforts to cut family size in less developed countries and their unclear results A principal topic is the relative accuracy of population statistics and the degree to which one should accept data as published The main focus is on the United States and especially on the Bureau of the Census but general points are sometimes illustrated with examples of how data from other countries should be evaluated **Secondary Education Journal** ,1981

Peace and Conflict Studies David P. Barash,Charles P. Webel,2008-07-10 Thoroughly revised the Second Edition of *Peace*

and Conflict Studies sets the new gold standard as an accessible introduction and comprehensive exploration of this vital subject. The authors share their vast knowledge and analysis about 21st century world events including new coverage on timely topics such as terrorism, the truth and reconciliation process, and the clash of civilizations. With an encyclopedic scope, this introductory text chronicles a plethora of important global topics from pre-history to the present. Key Features of the Second Edition: Includes updated chapters and examines current conflicts including the Iraq War; Explores the important aspects of positive peace, individual violence, nationalism, and terrorism; Provides numerous visual aids, questions for further study, and suggested readings; Furnishes a comprehensive range of material to enlighten and enrich future discussion and encourage further academic pursuit. Intended Audience: This text is invaluable for students and professors in peace and conflict studies, psychology, and/or the sociology of peace and conflict studies, international relations, comparative politics, history, and others interested in gaining a solid foundation about the global arena. Praise for the First Edition: Barash and Webel have penned a masterpiece that should appeal to seasoned scholars of peace and conflict studies as well as to others who have little knowledge of this multidisciplinary field.
