Potoczek,2019-01-01 The inspiration for this monograph is the progress in information and IT technologies observed over several decades and the accompanying development of digital competences The collected results of the research work are grouped into three distinct chapters which at the same time have a common denominator in research perspectives Network based economy innovation based economy and competence based economy are primarily analyzed in relation to technological changes in the ICT area Each of these perspectives ultimately leads towards Economy 4.0 due to the progressing digital revolution called the fourth industrial revolution The contemporary importance of networks innovations and managerial competences in the economy is analyzed primarily in connection with technological progress The issue of networks in economic life has been developing for over 30 years The role of the network in achieving a competitive advantage is unquestioned while research issues are still being developed This technological perspective is the most important context for network research today Contemporary business models are developed based on a skillfully built inter organizational network and a consciously used intra organizational network This applies to both commercial organizations and public entities These issues are reflected in articles contained in this monograph in particular in the first chapter Various research conducted in organizations proves the increasing awareness of the importance of social life by managers and leaders as well as the increase in the ability to build networks using information and ICT Research on networks which allows an understanding of the phenomenon of network formation leads to the creation of methods and tools supporting network management Modern network researchers especially in the field of management sciences point out that understanding the nature of the network and the possibilities of interacting with the network will determine the competitive position of the organization This awareness and the complexity of the network are a constant motivation to develop knowledge and use its application character The concept of an innovation based economy is included in the second chapter and is also related to technological progress in the field of communication The studies presented relate to the degree of innovation skillful differentiation of innovation and imitation the effectiveness of project financing and the implementation of innovation An important contribution to building knowledge on innovation comes

from research conducted in individual sectors or regions where a new important perspective is gained and specific sometimes unique determinants of creating innovation are pointed out. References to regional and sectoral conditions can be found in individual subchapters. The research conclusions drawn have a cognitive and practical value for both researchers and management practitioners. In the third chapter of the monograph studies that make an important contribution to building or verifying knowledge about the competence based economy are grouped together. The research refers to the most important management problems and barriers to the development of organizations related to employees' competences. Reference was made to many research currents in management e.g. to empower employees, build the image of the employer and the concept of sustainable development. Due to their long history of development they would seem to be running out while researchers prove that in contemporary commercial and non-commercial organizations deficits in managerial competencies are still identified. This applies to both human management and technical competences especially digital. Therefore research indicating the reasons for a lack of competence in an era of strong popularization of these issues seems to be interesting. The purpose of this monograph was to present current research results and their importance in developing knowledge about the economy based on networks, innovations and competences. A lot of research was conducted from the perspective of changes in technological progress and the challenges of Economy 4.0. The new possibilities brought by the digital revolution in the field of building and managing networks and developing network based business models cannot be underestimated. It should be expected that future innovations will be developed mainly thanks to digital progress and will be determined by the digital competences of managers and leaders. Modern research also shows that new generations of employees will compete primarily in the use of modern technological solutions such as data acquisition and processing, analyzes and simulations on large data sets, big data science, data automation and robotization of production processes, software integration, cloud solutions and especially the increasingly comprehensive use of the Internet. The importance of scientific research for learning about future phenomena, understanding and taming the future is invaluable. The authors and editors of the book express the hope that the research results presented in it will become an inspiration for new scientific explorations and the implementation of changes in organizations and economics.

The Janus-Face of Language: Where

Are the Emotions in Words and the Words in Emotions? Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28. Language has long been considered independent from emotions. In the last few years, however, research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language. In particular, through research on emotional word processing, it has been shown that processing of emotional words activates emotional brain structures, elicits emotional facial expressions and modulates action tendencies of approach and avoidance, probably in a similar manner as processing of non-verbal emotional stimuli does. In addition, it has been shown that emotional content is already processed in the visual cortex in a facilitated manner, which suggests that processing of

emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one s own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions
