

- 1 Use logarithms to solve the equation  $e^x = 3^{x-2}$ , giving your answer correct to 3 decimal places. [3]

- 2 (i) Use the trapezium rule with 3 intervals to estimate the value of

$$\int_{\frac{1}{2}\pi}^{\frac{3}{2}\pi} \operatorname{cosec} x \, dx,$$

giving your answer correct to 2 decimal places. [3]

- (ii) Using a sketch of the graph of  $y = \operatorname{cosec} x$ , explain whether the trapezium rule gives an overestimate or an underestimate of the true value of the integral in part (i). [2]

- 3 The polynomial  $ax^3 + bx^2 + x + 3$ , where  $a$  and  $b$  are constants, is denoted by  $p(x)$ . It is given that  $(3x + 1)$  is a factor of  $p(x)$ , and that when  $p(x)$  is divided by  $(x - 2)$  the remainder is 21. Find the values of  $a$  and  $b$ . [5]

- 4 The parametric equations of a curve are

$$x = \frac{1}{\cos^3 t}, \quad y = \tan^3 t,$$

where  $0 \leq t < \frac{1}{2}\pi$ .

- (i) Show that  $\frac{dy}{dx} = \sin t$ . [4]

- (ii) Hence show that the equation of the tangent to the curve at the point with parameter  $t$  is  $y = x \sin t - \tan t$ . [3]

- 5 Throughout this question the use of a calculator is not permitted.

The complex numbers  $w$  and  $z$  satisfy the relation

$$w = \frac{z + i}{iz + 2}.$$

- (i) Given that  $z = 1 + i$ , find  $w$ , giving your answer in the form  $x + iy$ , where  $x$  and  $y$  are real. [4]
- (ii) Given instead that  $w = z$  and the real part of  $z$  is negative, find  $z$ , giving your answer in the form  $x + iy$ , where  $x$  and  $y$  are real. [4]

**Modeling Individual Differences in Perceptual Decision Making** Joseph W. Hout, Cheng-Ta Yang, James T. Townsend, 2017-01-18 To deal with the abundant amount of information in the environment in order to achieve our goals human beings adopt a strategy to accumulate some information and filter out other information to ultimately make decisions Since the development of cognitive science in the 1960s researchers have been interested in understanding how human beings process and accumulate information for decision making Researchers have conducted extensive behavioral studies and applied a wide range of modeling tools to study human behavior in simple detection tasks and two choice decision tasks e g discrimination classification In general researchers often assume that the manner in which information is processed for decision making is invariant across individuals given a particular experimental context Independent variables including speed accuracy instructions stimulus properties i e intensity and characteristics of the participants i e aging cognitive ability are assumed to affect the parameters in a model i e speed of information accumulation response bias but not the way that participants process information e g the order of information processing Given these assumptions much modeling has been accomplished based on the grouped data rather than the individual data However a growing number of studies have demonstrated that there were individual differences in the perceptual decision process In the same task context different groups of the participants may process information in different manners The capacity and architecture of the decision mechanism were found to vary across individuals implying that humans decision strategies can vary depending on the context to maximize their performance In this special issue we focused on a particular subset of cognitive models particularly accumulator models multinomial processing trees and systems factorial technology SFT as applied to perceptual decision making The motivation for the focus on perceptual decision making is threefold Empirical studies of perception have grown out of a history of making a large number of observations for each individual so as to achieve precise estimates of each individual s performance This type of data rather than a small number of observations per individual is most amenable to achieving precision in individual level and group level cognitive modeling Second the interaction between the acquisition of perceptual information and the decisions based on that information to the extent that those processes are distinguishable offers rich data for scientific exploration Finally there is an increasing interest in the practical application of individual variation in perceptual ability whether to inform perceptual training and expertise or to guide personnel decisions Although these practical applications are beyond the scope of this issue we hope that the research presented herein may serve as the foundation for future endeavors in that domain
