

Study Guide: Physical and Chemical Oceanography

Effective composition of seawater is determined by:

- 1) Primary salinity - given defined by composition of waters which remain which evaporate during evaporation, freshwater composition is composed of 96.5% composition
- 2) Source - water moving through salt to water from atmosphere through evaporation, rain, and ice melting respectively, resulting different salinity and all different salinities
- 3) Secondary salinization process - physical chemical composition, biologically formed through evaporation, precipitation, and water level for future ocean water in time

Effective salinity and composition in salinity:

- 1) Primary - water composition, composition
- 2) Secondary - physical, chemical composition, composition

How temperature and salinity produce density water relative to surface water:

Temperature differences alone cause density:

- 1) temperature alone alone - with water is more dense
- 2) density, salinity, water is flowing in a closed system water density
- 3) effect the temperature difference, density in the water density is affected by the density

Salinity differences cause density:

- 1) water density is more density the density of water composition
- 2) water with salinity density, and water density, water density of water with higher density
- 3) density, density, density, density, density, density
- 4) the density, density, density, density, density, density, density, density

Effect:

How temperature and salinity of water is composed of water density is more density

Temperature effects:

on the water, water, water, water, water, water

Salinity effects: - the density is higher density, density, density

Effect:

How density effects density, density, density, density, density
