

## Physical Science 101 - Kinematically Weighting

### Proposed:

We want your input on the principle that we propose to use in a new weighting system.

### Background:

Because of the nature of the data, we are using a weighting system that is not a simple average. We are using a weighting system that is not a simple average.

### Proposed:

#### 1. The data is a set of three values:

A set of three values, independent of the data.

These values:

We will provide the data for the first two values and the third value is the value of the third value.

2. The data is a set of three values: The first two values are the values of the first two values and the third value is the value of the third value. The data is a set of three values: The first two values are the values of the first two values and the third value is the value of the third value.

$$\% \text{ difference} = \frac{\text{actual value} - \text{estimated value}}{\text{actual value}} \times 100\%$$

#### 3. The data is a set of three values: The first two values are the values of the first two values and the third value is the value of the third value.

4. Using the data, we will provide the data for the first two values and the third value is the value of the third value. The data is a set of three values: The first two values are the values of the first two values and the third value is the value of the third value.

5. The data is a set of three values: The first two values are the values of the first two values and the third value is the value of the third value. The data is a set of three values: The first two values are the values of the first two values and the third value is the value of the third value.
