Beyond Curie Scott Calvin, 2017-07-31 In the 116 year history of the Nobel Prize in Physics only two women have won the award Marie Curie 1903 and Maria Mayer 1963 During the 60 years between those awards several women did work of similar calibre This book focuses on those women providing biographies for each

that discuss both how they made their discoveries and the gender specific reception of those discoveries It also discusses the Nobel process and how society and the scientific community's treatment of them were influenced by their gender

Global Justice, Natural Resources, and Climate Change Megan Blomfield, 2019-05-16 To address climate change fairly many conflicting claims over natural resources must be balanced against one another This has long been obvious in the case of fossil fuels and greenhouse gas sinks including the atmosphere and forests but it is ever more apparent that responses to climate change also threaten to spur new competition over land and extractive resources This makes climate change an instance of a broader more enduring and for many all too familiar problem the problem of human conflict over how the natural world should be cared for protected shared used and managed This work develops a new theory of global egalitarianism concerning natural resources rejecting both permanent sovereignty and equal division which is then used to examine the problem of climate change It formulates principles of resource right designed to protect the ability of all human beings to satisfy their basic needs as members of self determining political communities where it is understood that the genuine exercise of collective self determination is not possible from a position of significant disadvantage in global wealth and power relations These principles are used to address the question of where to set the ceiling on future greenhouse gas emissions and how to share the resulting emissions budget in the face of conflicting claims to fossil fuels climate sinks and land It is also used to defend an unorthodox understanding of responsibility for climate change as a problem of global justice based on its provenance in historical injustice concerning natural resources

Handbook of Terminal Planning Jürgen W. Böse, 2020-09-14 Seaport Container Terminals SCT operate as central nodes in worldwide hub and spoke networks and link ocean going vessels with smaller feeder vessels as well as with inbound and outbound hinterland transportation systems using road rail or inland waterways The volume of transcontinental container flows has gained enormously over the last five decades frequently leading to double digit annual growth rates for the SCT The 2nd edition of the Handbook of Terminal Planning also deals with problems being induced by questions of terminal development on a long term basis strategic level Facing present and upcoming challenges for SCT operation such as more and more mega vessels extremely high hinterland peaks higher environmental standards less public acceptance and the stronger competition between terminals serving the same hinterland the focus of the book is on successful approaches and solutions primarily addressing the planning of terminal structures Nevertheless operational aspects are considered as well as how they effectively contribute to problem solving on the strategic level
