Board of Education, Mich. Public schools Marshall, 1884 *Breaking the STEM Stereotype* Amanda Alzena Sullivan, 2019-10-21 Men continue to outnumber women in numerous technical STEM Science Technology Engineering and Math fields such as engineering and computer science Prior

work demonstrates the importance of introducing girls to STEM content early on before gender stereotypes are ingrained. However, many parents and teachers are not sure how to do this in a developmentally appropriate and playful way. *Breaking the STEM Stereotype: Reaching Girls in Childhood* by Dr. Amanda Sullivan, Ph.D., explores the various social, cultural, and psychological reasons behind the persistent gender disparity between men and women in STEM fields. By explaining the powerful role of stereotypes, the media, and experiences with peers and adults during the foundational early childhood years, this book builds the case for early childhood being a critical time in development to reach girls. *Breaking the STEM Stereotype* is set up in three parts. Part 1 provides the current state of the gender divide in each aspect of STEM and explores why early childhood is a critical time to address this divide. Part 2 explores gender identity development and gender stereotypes as well as the influences of the media, advertising, and adult and peer role models on young children. Finally, Part 3 arms readers with the knowledge they need to dispel gender stereotypes in STEM. It provides suggestions on tools, technologies, and kits that can be used with young girls beginning in pre-kindergarten. It provides materials needed to design effective curricula and activities to engage girls with STEM in playful ways that build on their personal interests. *Bulletin of the State Normal School, Milwaukee, Wis.* Wisconsin State Normal School (Milwaukee), 1909. **The Kindergarten-primary Magazine**, Bertha Johnston, E. Lyell Earle, 1919. **The Kindergarten-primary Magazine**, 1909. **The Dewey School**, Anna Edwards, 2017-07-05. This book talks of perhaps one of the greatest education experiments in the history of America. In 1894, John Dewey moved his position as Chairman of the Philosophy Department at the University of Michigan to assume the position as Chairman of the Department of Philosophy, Psychology, and Pedagogy at the University of Chicago. He would remain there until 1904; his departure prompted in great part by his dissatisfaction regarding his wife's treatment by the administration in her role of principal of the Laboratory School. At this time, Dewey was anxious to translate his more abstract ideas into practical form, and he saw the position at Chicago affording him a rare opportunity to do this. The school itself was conceived by Dewey as having an organic functional relation to the theoretical curriculum. Just as Dewey was anxious to merge philosophy and psychology and to relate both of these disciplines to the theoretical study of education, similarly, he saw the school as a laboratory for these studies, analogous to the laboratory used in science courses. This effort to merge theory and practice is perhaps the major characteristic of Dewey's entire professional career. In the opening sentence of Dewey's remarks in his essay in this volume, *The Theory of the Chicago Experiment*, we see the extent to which this problem preoccupied him. The gap between educational theory and its execution in practice is always so wide that there naturally arises a doubt as to the value of any separate presentation of purely theoretical principles. This book is an accurate and detailed account of one of the most interesting experiments ever undertaken in America. It provides the reader with the complexity of John Dewey's abstract philosophy, experimentalism. *Kindergarten Review*, 1912.
