- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or natural light sources. To avoid this, there are two things the producer should be aware of in the case of the Forest.
- Natural sources of light will only work with the use of the standard time specifications, the length of the season may differ depending on the soil moisture availability.
- The soil moisture level is important, it may change the production rate. The producer should be aware of the soil's capacity to hold water for these periods of growth.
- Natural light can be used for the 50 days of a year.

When you install your T-Value One Connection, improper installation of all four screws (50 combinations for One Connection) will void the warranty. Please, before installing, refer to the correct installation instructions. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will want to produce more of the output, and if the price falls, the producer will want to produce less of the output.
