

SAMSUNG Color Wheel

\$185 + gst

Symptoms of a Defective Color Wheel

1. Noisy Operation - When a SAMSUNG DLP whines or squeals, the color wheel is defective. The wheel rotates at 8,000 RPM and makes noise when the bearings are worn out.

2. Black and White picture is also an indication of a defective Color Wheel.

3. TV will not start after bulb replacement. Air pressure from Popping Bulb causes damage to the color wheel.

To fix the problem, the light engine assembly is removed, color wheel is replaced and any necessary adjustments are completed. There are a variety of color wheels, depending on the model and chassis.

Color Wheel replacement is available for all Samsung models.
