Payne,1998 Nature's Matrix Ivette Perfecto,John Vandermeer,Angus Wright,2019-05-31 When first published in 2009 Nature s Matrix set out a radical new approach to the conservation of biodiversity This new edition pushes the frontier of the biodiversity agriculture debate further making an even stronger case for the need to transform agriculture and support small and medium scale agroecology and food sovereignty In the first edition the authors set out a radical new approach to the conservation of biodiversity This is based on the concept of a landscape as a matrix of diverse small scale agricultural ecosystems providing opportunities to enhance conservation under the stewardship of local farmers This contrasts with the alternative view of industrial scale farms and large protected areas which exclude local people However since then the debate around conservation and agriculture has developed significantly and this is reflected in this updated second edition The text is thoroughly revised including a reorganization of chapters with new and timely topics introduced updates to the

discussion of agroecology and food sovereignty bringing it in line with the current debates greater coverage of the role of agroecology in particular agroforestry as an important component of climate change adaptation and mitigation highlighting recent studies on the role of intensive agriculture in climate change and loss of biodiversity and more attention given to the discussion of land sparing versus land sharing By integrating the ecological aspects of agriculture and conservation biology with a political and social analysis as well as historical perspective the book continues to set a progressive agenda and appeals to a wide range of students and professionals Humanities for the Environment Joni Adamson, Michael

Davis, 2016-11-10 Humanities for the Environment or HfE is an ambitious project that from 2013 2015 was funded by a generous grant from the Andrew W Mellon Foundation The project networked universities and researchers internationally through a system of observatories This book collects the work of contributors networked through the North American Asia Pacific and Australia Pacific observatories Humanities for the Environment showcases how humanists are working to integrate knowledges from diverse cultures and ontologies and pilot new constellations of practice that are moving beyond traditional contemplative or reflective outcomes the book the essay towards solutions to the greatest social and environmental challenges of our time With the still controversial concept of the Anthropocene as a starting point for a widening conversation contributors range across geographies ecosystems climates and weather regimes moving from icy melting Arctic landscapes to the bleaching Australian Great Barrier Reef and from an urban pedagogical laboratory in Phoenix Arizona to Vatican City in Rome Chapters explore the ways in which humanists in collaboration with communities and disciplines across academia are responding to warming oceans disappearing islands collapsing fisheries evaporating reservoirs of water exploding bushfires and spreading radioactive contamination This interdisciplinary work will be of great interest to scholars in the humanities social sciences and sciences interested in interdisciplinary questions of environment and culture

**Architectural Theories of the Environment** Ariane Lourie Harrison, 2013-03-05 As architects and designers we struggle to reconcile ever increasing environmental humanitarian and technological demands placed on our projects Our new geological era the Anthropocene marks humans as the largest environmental force on the planet and suggests that conventional anthropocentric approaches to design must accommodate a more complex understanding of the interrelationship between architecture and environment Here for the first time editor Ariane Lourie Harrison collects the essays of architects theorists and sustainable designers that together provide a framework for a posthuman understanding of the design environment An introductory essay defines the key terms concepts and precedents for a posthuman approach to architecture and nine fully illustrated case studies of buildings from around the globe demonstrate how issues raised in posthuman theory provide rich terrain for contemporary architecture making theory concrete By assembling a range of voices across different fields from urban geography to critical theory to design practitioners this anthology offers a resource for design professionals educators and students seeking to grapple the ecological mandate of our current period Case studies
