

Answers to examination-style questions

Answers	Marks	Examiner's tips
1 (a) sinoatrial node/SAN;	1	SAN can be used to represent the s-noatrial node.
(b) (i) to allow the contraction/emptying of the atrium before the ventricle contracts/allows ventricles to fill before contraction;	1	Remember both atria contract simultaneously, followed by simultaneous contraction of the ventricles.
(ii) to force the blood upwards and out of heart;	1	This is required to force the blood upwards against gravity.
(c) (i) 0.3 s;	1	Blood pressure in the ventricle is greater than that in the aorta, forcing blood into the aorta.
(ii) 0.2 and 0.4 s;	1	Blood pressure in the ventricle is greater than that in the atrium, forcing the atrioventricular valves shut.
(d) thicker/more muscle in the left ventricle;	1	More muscle means a greater force of contraction.
2 (a) aortic valve/semi-lunar valve;	1	Always read the stem of the question. It states 'left side of the heart' so X must be the aortic valve.
(b) any 2 from – thicker wall of ventricle/reduced volume; atrioventricular/bicuspid valve shut; semi-lunar/aortic valve/valve X open;	2 max	Reference to the tricuspid valve would be marked wrong because the diagram is of the left side of the heart.
(c) (i) 178%; $750 - 270 = 480$, $(480/270) \times 100 = 177.7$;	2	Correct answer = 2 marks. Correct working but incorrect answer = 1 mark.
(ii) provides glucose and oxygen and removes carbon dioxide; increases respiration/increases ATP yield;	2	Many candidates forget that blood removes carbon dioxide from respiring cells.
3 (a) (i) 75 beats per minute;	1	The question states a complete cardiac cycle, so add all the times together to give the total time for one heartbeat = 0.8 s. Then divide 60 s by 0.8 = 75.
(ii) 4.5 hours;	1	A quick method of calculating this is that the ventricle contracts for 3/8th of the total time. Therefore 3/8th of 12 hours = 4.5 hours
