**Standing Together** Beverly J. Klug, 2012-11-28 The majority of American Indian students attend public schools in the United States However education mandated for American Indian students since the 1800s has been primarily education for assimilation with the goal of eliminating American Indian cultures and languages Indeed extreme measures were taken to ensure Native students would act white as a result of their involvement with Western education Today s educational mandates continue a hegemonic one size fits all approach to education This is in spite of evidence that these approaches have

rarely worked for Native students and have been extremely detrimental to Native communities This book provides information about the importance of teaching American Indian students by bridging home and schools using students cultural capital as a springboard for academic success Culturally Responsive Pedagogy is explored from its earliest beginnings following the 1928 Meriam Report Successful education of Native students depends on all involved and respect for the voices of American Indians in calling for education that holds high expectations for native students and allows them to be grounded in their cultures and languages *Ebersole & Hess' Toward Healthy Aging - E-Book* Theris A. **The Longevity Code** Kris Verburgh, 2018-01-23 Why do we grow old? Verburgh tackles this age-old question with practical suggestions for how to slow down our biological clock. David Ludwig, MD, PhD, 1 New York Times bestselling author. Do you know exactly how and why you age? And what you can do whatever your current age to slow that process and have a longer, healthier life? In *The Longevity Code*, medical doctor Kris Verburgh illuminates the biological mechanisms that make our bodies susceptible to heart attacks, dementia, diabetes, and other aging-related diseases. With the facts laid out, he provides the tools we need to slow down the aging process. His scientifically backed Longevity Staircase outlines a simple yet innovative step-by-step method offering better health and a longer life span, especially the crucial role of proper nutrition and exercise. But diet and exercise might not be the only way to crack the longevity code. With each passing day, advances in biotechnology that were once the stuff of science fiction are emerging. Dr. Verburgh discusses how new types of vaccines, mitochondrial DNA, CRISPR proteins, and stem cells may help us slow and even reverse aging now and in the future, and when paired with the right lifestyle, lead to longer, healthier lives than we've ever imagined. Verburgh examines how we age and takes a valuable look at ethical issues surrounding the prevention of aging. Library Journal
