High-Performance Bolting Technology for Offshore Oil and Natural Gas Operations National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Committee on Connector Reliability for Offshore Oil and Natural Gas Operations, 2018-07-12 Commercially significant amounts of crude oil and natural gas lie under the continental shelf of the United States. Advances in locating deposits and improvements in drilling and recovery technology have made it technically and economically feasible to extract these resources under harsh conditions. But extracting these offshore petroleum resources involves the possibility, however remote, of oil spills with resulting damage to the ocean and the coastline ecosystems and risks to life and limb of those performing the extraction. The environmental consequences of an oil spill can be more severe underwater than on land because sea currents can quickly disperse the oil over a large area and thus cleanup can be problematic. Bolted connections are an integral feature of deep water well operations. High Performance Bolting Technology for Offshore Oil and Natural Gas Operations summarizes strategies for improving the reliability of fasteners used in offshore oil exploration equipment as well as best practices from other industrial sectors. It focuses on critical bolting bolts, studs, nuts, and fasteners used on critical connections.

The Metric Tide James Wilsdon, 2016-01-20 Represents the culmination of an 18 month long project that aims to be the definitive review of this important topic. Accompanied by a scholarly literature review, some new analysis, and a wealth of evidence and insight, the report is a tour de force, a once in a generation opportunity to take stock. Dr Steven Hill, Head of Policy, HEFCE, LSE Impact of Social Sciences Blog: A must read if you are interested in having a deeper understanding of research culture, management issues, and the range of information we have on this field. It should be disseminated and discussed within institutions, disciplines, and other sites of research collaboration. Dr Meera Sabaratnam, Lecturer in International Relations at the School of Oriental and African Studies, University of London, LSE Impact of Social Sciences Blog: Metrics evoke a mixed reaction from the research community. A commitment to using data and evidence to inform decisions makes many of us sympathetic, even enthusiastic, about the prospect of granular, real time analysis of our own activities. Yet we only have to look around us at the blunt use of metrics to be reminded of the pitfalls. Metrics hold real power; they are constitutive of values, identities, and livelihoods. How to exercise that power to positive ends is the focus of this book. Using extensive evidence, gathering analysis, and consultation, the authors take a thorough look at potential uses and limitations of research metrics and indicators. They explore the use of metrics across different disciplines, assess their potential contribution to the development of research excellence and impact, and consider the changing ways in which universities are using quantitative indicators in their management systems. Finally, they consider the negative or unintended effects of metrics on various aspects of research culture. Including an updated introduction from James Wilsdon, the book proposes a framework for responsible metrics and makes a series of targeted

recommendations to show how responsible metrics can be applied in research management by funders and in the next cycle of the Research Excellence Framework The metric tide is certainly rising Unlike King Canute we have the agency and opportunity and in this book a serious body of evidence to influence how it washes through higher education and research

Publishers' Circular and Booksellers' Record of British and Foreign Literature, 1916 **Learning to Improve** Anthony S. Bryk, Louis M. Gomez, Alicia Grunow, Paul G. LeMahieu, 2015-03-01 As a field education has largely failed to learn from experience Time after time promising education reforms fall short of their goals and are abandoned as other promising ideas take their place In *Learning to Improve* the authors argue for a new approach Rather than implementing fast and learning slow they believe educators should adopt a more rigorous approach to improvement that allows the field to learn fast to implement well Using ideas borrowed from improvement science the authors show how a process of disciplined inquiry can be combined with the use of networks to identify adapt and successfully scale up promising interventions in education Organized around six core principles the book shows how networked improvement communities can bring together researchers and practitioners to accelerate learning in key areas of education Examples include efforts to address the high rates of failure among students in community college remedial math courses and strategies for improving feedback to novice teachers *Learning to Improve* offers a new paradigm for research and development in education that promises to be a powerful driver of improvement for the nation's schools and colleges

Newton,2014-03-05 Are emotions good or bad for thinking and learning Have you ever wondered why a good lesson of one year falls flat in another Why do students behave the way they do Teachers are expected to foster productive thought yet the neglect of emotion in the classroom in favour of intellect means teaching and learning is often not as effective as it might be Thinking with Feeling explores what we mean by productive thought its interrelationship with mood and emotions how teachers can manage that interaction to improve teaching and learning and what teacher trainers could do about it Synthesising the most important international research in the field it offers a framework for productive purposeful thought deduction understanding creative thinking wise thinking and critical thinking and explains how mood and emotion can support and also impede learning It considers the effect of the interplay of emotion and intellect on classroom behaviour on students public performance and performance in tests and how emotional labour can affect the teacher Illustrated with examples from practice this challenging thoughtful study offers education professionals a basis for understanding the interaction of emotions and cognition and making it a successful partnership in order to improve teaching and learning [ESRC Newsletter](#) ,1985 [At the doors of lexical access: The importance of the first 250 milliseconds in reading](#) Jon Andoni Dunabeitia,Nicola Molinaro,2014-09-30 Correct word identification and processing is a prerequisite for accurate reading and decades of psycholinguistic and neuroscientific research have shown that the magical moments of visual word recognition are short lived and markedly fast The time window in which a given letter string passes from being a mere sequence of printed curves and strokes to acquiring the word status takes around one third of a second In a few hundred milliseconds a skilled reader recognizes an isolated word and carries out a number of underlying processes such as the encoding of letter position and letter identity and lexico semantic information retrieval However the precise manner and order in which these processes occur or co occur is a matter of contention subject

to empirical research There s no agreement regarding the precise timing of some of the essential processes that guide visual word processing such as precise letter identification letter position assignment or sub word unit processing bigrams trigrams syllables morphemes among others Which is the sequence of processes that lead to lexical access How do these and other processes interact with each other during the early moments of word processing Do these processes occur in a serial fashion or do they take place in parallel Are these processes subject to mutual interaction principles Is feedback allowed for within the earliest stages of word identification And ultimately when does the reader s brain effectively identify a given word A vast number of questions remain open and this Research Topic will cover some of them giving the readership the opportunity to understand how the scientific community faces the problem of modeling the early stages of word identification according to the latest neuroscientific findings The present Research Topic aimed to combine recent experimental evidence on early word processing from different techniques together with comprehensive reviews of the current work directions in order to create a landmark forum in which experts in the field defined the state of the art and future directions We were willing to receive submissions of empirical as well as theoretical and review articles based on different computational and neuroscience oriented methodologies We especially encouraged researchers primarily using electrophysiological or magnetoencephalographic techniques as well as eye tracking to participate given that these techniques provide us with the opportunity to uncover the mysteries of lexical access allowing for a fine grained time course analysis The main focus of interest concerned the processes that are held within the initial 250 300 milliseconds after word presentation covering areas that link basic visuo attentional systems with linguistic mechanisms
