This book consists of sixty-seven selected papers presented at the 2015 International Conference on Software Engineering and Information Technology SEIT2015 which was held in Guilin Guangxi China during June 26-28, 2015. The SEIT2015 has been an important event and has attracted many scientists, engineers, and researchers from academia, government laboratories, and industry internationally. The papers in this book were selected after rigorous review. SEIT2015 focuses on six main areas: namely, Information Technology, Computer Intelligence, and Computer Applications, Algorithm and Simulation, Signal and Image Processing, Electrical Engineering, and Software Engineering. SEIT2015 aims to provide a platform for global researchers and practitioners from both academia as well as industry to meet and share cutting-edge development in the field. This conference has been a valuable opportunity for researchers to share their knowledge and results in theory, methodology, and applications of Software Engineering and Information Technology. **Remote Sensing Application for Precision Agriculture**

Matthew McCabe, Chunyuan Diao, Xiuliang Jin, Zhenhai Li, Dameng Yin, 2023-08-11. Precision agriculture is used to improve site-specific agricultural decision making based on data collection and analysis, formulation of site-specific management recommendations, and implementation of management practices to correct for factors that can limit crop growth, yield, and quality. Various approaches for the remote sensing of soil fertility, water stress, diseases, and infestations and crop growth and condition have been developed and applied for precision agricultural purposes. With developments in remote sensing technologies, the spatial and spectral resolution and return frequencies available from both satellite and other remote collection platforms have improved to the point that the promise of precision agriculture can increasingly be realized. Unmanned aerial vehicles (UAV) in particular are providing newer and deeper insights, leveraging their high-resolution sensor, carrying flexibility, and dynamic acquisition schedule. This range of remote sensing platforms has been used to estimate comprehensive information related to crop health and dynamics, providing rapid retrievals of leaf area index, canopy cover, chlorophyll, nitrogen, canopy leaf water content, canopy leaf temperature, biomass, and yield, amongst many other variables of interest. In combination, they allow for the expansion from local to regional scales and beyond. There has never been a greater opportunity for remote sensing data to enable precision agricultural insights that can be used to better monitor, manage, and respond to in-field changes that might impact crop growth, health, and yield. **Remote Sensing Advances in Biodiversity and Ecosystem Functioning Research**

Zhouyuan Li, Weiwei Sun, Yanjie Xu, Jixi Gao, Shijia Peng, 2024-02-06. Different dimensions of biodiversity are increasingly appreciated as critical for maintaining the functions of ecosystems and their services to humans. More recently, with the emergence of functional biogeography, functional diversity is of particular interest.

due to its strong links with ecosystem processes such as carbon water and energy exchange and climate mitigation The multi form diversity varies in space and time Understanding this variation across scales is important for tracking the resilience of Earth s ecosystem and the information on the ecosystem structural features provides necessary foundations for monitoring predicting the ecosystem functioning patterns and process of ecosystems from individual unit to its whole in a holistic manner In recent the high resolution high throughput non intrusive and large scale data on biodiversity monitoring and measurement are becoming a new trend toward enhancing the efficiency and coherency in ecological discovery Still the available multi scale data on multi dimensional diversity are incomplete and non representative taxonomically geographically and temporally Although the studies on functional traits and their relations with function continue to grow local observations on functional traits are limited Recently remote sensing has proved to be a critical technology for addressing this research gap Air and satellite borne spectrometers at different levels could develop novel diversity measurements and alternati
