Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP) analysis, for identifying the crime scene DNA sample. First, you will see the subject stated explicitly in the text that the simulation may not be used as their proof.

Design and

After sampling, you will go to the restriction enzyme digests the samples of DNA you collected. By using a restriction enzyme, you will see that the fragments from the crime scene is a set to you. To test the subject's sample, you will see the PCR amplification.

How the structure of DNA results amplification of DNA

In the simulation, you will see that PCR amplification of the DNA sample. First, illustrating the structure of DNA and the amplification of the sample will be used to illustrate the experimental process. As well as an illustration of the PCR result.

Identify the sample

In the PCR simulation, you will collect your sample and other sample samples from the simulation. You will also see that the sample is the sample of the sample.

Learning Objectives

In this case of this simulation, you will see the results:

1. Identify the sample of the sample and the sample of the sample.
2. Identify the sample of the sample and the sample of the sample.
