Embedded Autonomy Peter B. Evans, 2012-01-12 In recent years debate on the state's economic role has too often devolved into diatribes against intervention Peter Evans questions such simplistic views offering a new vision of why state involvement works in some cases and produces disasters in others To illustrate he looks at how state agencies local entrepreneurs and transnational corporations shaped the emergence of computer industries in Brazil India and Korea during the seventies and eighties Evans starts with the idea that states vary in the way they are organized and tied to society In some nations like Zaire the state is predatory ruthlessly extracting and providing nothing of value in return In others like Korea it is developmental promoting industrial transformation In still others like Brazil and India it is in between sometimes helping sometimes hindering Evans's years of comparative research on the successes and failures of state involvement in the process of industrialization have here been crafted into a persuasive and entertaining work which demonstrates that successful state action requires an understanding of its own limits a realistic relationship to the global economy and the combination of coherent internal organization and close links to society that Evans called embedded autonomy
