In *A Book of Waves* Stefan Helmreich examines ocean waves as forms of media that carry ecological, geopolitical and climatological news about our planet. Drawing on ethnographic work with oceanographers and coastal engineers in the Netherlands, the United States, Australia, Japan and Bangladesh, Helmreich details how scientists at sea and in the lab apprehend waves' materiality through abstractions, seeking to capture in technical language these avatars of nature at once periodic and irreversible, wild and pacific, ephemeral and eternal. For researchers and their publics, the meanings of waves also reflect visions of the ocean as an environmental infrastructure fundamental to trade, travel, warfare, humanitarian rescue, recreation and managing sea level rise. Interleaving ethnographic chapters with reflections on waves in mythology, surf culture, feminist theory, film, Indigenous Pacific activism, Black Atlantic history, cosmology and more, Helmreich demonstrates how waves mark out the wakes and breaks of social histories and futures.

Fluorescence Methods for Investigation of Living Cells and Microorganisms Natalia Grigoryeva, 2020-09. Fluorescence methods play a leading role in the investigation of biological objects. They are the only non-destructive methods for investigating living cells and microorganisms in vivo. Using intrinsic and artificial fluorescence methods provides deep insight into mechanisms underlying physiological and biochemical processes. This book covers a wide range of modern methods involved in experimental biology. It illustrates the use of

fluorescence microscopy and spectroscopy confocal laser scanning microscopy flow cytometry delayed fluorescence pulse amplitude modulation fluorometry and fluorescent dye staining protocols This book provides an overview of practical and theoretical aspects of fluorescence methods and their successful application in the investigation of static and dynamic processes in living cells and microorganisms

Global Ecology and Oceanography of Harmful Algal Blooms Patricia M. Glibert, Elisa Berdalet, Michele A. Burford, Grant C. Pitcher, Mingjiang Zhou, 2018-04-26. Harmful algal blooms (HABs) blooms that cause fish kills, contaminate seafood with toxins or cause human or ecological health impacts and harm to local economies are occurring more often in more places and lasting longer than in past decades. This expansion is primarily the result of human activities through increased nutrient inputs and various aspects of climate change. The Global Ecology and Oceanography of Harmful Algal Blooms (GEOHAB) programme promoted international collaboration to understand HAB population dynamics in various oceanographic regimes and to improve the prediction of HABs. This volume introduces readers to the overarching framework of the GEOHAB programme, factors contributing to the global expansion of harmful algal blooms, the complexities of HABs in different habitats and the forward looking issues to be tackled by the next generation of GEOHAB. GlobalHAB: The programme brought together an international team of contributing scientists and ecosystem managers and its outcomes will greatly benefit the international research community.
