A Laboratory Activity for the Living Environment

Introduction

Monarda mollis is a native plant species of grassland. **2006** is considered good for studying certain parts of nature. Considered for protection and restoration. *Monarda mollis* grows very slowly, which is the challenge of species that make living in grassland hard to bring back to life.

Species that are most closely related to *Monarda mollis* are most likely to produce the important adaptations. Some other plant species that are plants (e.g., *Monarda*) may be related to *Monarda mollis*. You will learn about this in the lab.

- get a **relationship and evolutionary relationship** to determine which plant species is most closely related to the experimental species, *Monarda mollis*.
- use this evidence to decide which plant species is most likely to survive and be successful in the important relationship.

Pre-Lab

Using the information from the previous introduction, explain the problems we are trying to solve in this lab and how we are going to solve it.
