ROOT TIP EXAMINATION

AIM/INTRODUCTION
To examine the structure of the root tip.

THEORY
The root tip is the region of the root where new cells are produced. It is the site of mitosis and is therefore the most active part of the root.

EXPERIMENTAL PROCEDURE
1. Cut a thin slice of the root tip (approx. 1mm thick) using a sharp razor blade.
2. Stain the root tip with a solution of toluidine blue (a basic dye) to stain the cells.
3. Mount the root tip on a slide with a drop of water and a cover slip.
4. Examine the root tip under a light microscope.

RESULTS
The root tip shows a clear region of mitosis (the meristem) at the tip. The cells in this region are small and densely packed. The cells further away from the tip are larger and more elongated.

CONCLUSION
The root tip is the site of mitosis and is therefore the most active part of the root. The cells in the meristem are small and densely packed, while the cells further away are larger and more elongated.

PAGE 2
PHOTOTROPISM

AIM/INTRODUCTION
To investigate the response of a plant to light (phototropism).

THEORY
Plants have the ability to grow towards a light source. This is known as phototropism. It is caused by the hormone auxin, which is produced in the shoot tip and moves down the stem. Auxin causes the cells on the side of the stem furthest from the light to elongate, causing the stem to bend towards the light.

EXPERIMENTAL PROCEDURE
1. Grow a plant in a pot with a light source on one side.
2. Observe the plant's growth over time.
3. Measure the angle of the plant's stem relative to the vertical.

RESULTS
The plant's stem bends towards the light source. The angle of the stem increases over time.

CONCLUSION
The plant's stem bends towards the light source, demonstrating phototropism. This is caused by the hormone auxin, which causes the cells on the side of the stem furthest from the light to elongate.

PAGE 3
EXPERIMENTAL PLANTING TO INVESTIGATE MICROBIAL GROWTH

AIM/INTRODUCTION
To investigate the growth of microorganisms on different media.

THEORY
Microorganisms can grow on different media. Some media are selective, meaning they only allow certain types of microorganisms to grow. Other media are differential, meaning they allow different types of microorganisms to be distinguished.

EXPERIMENTAL PROCEDURE
1. Inoculate different media with different microorganisms.
2. Observe the growth of the microorganisms over time.
3. Record the characteristics of the growth (e.g. colour, texture, shape).

RESULTS
The growth of the microorganisms varies depending on the media. Some media show selective growth, while others show differential growth.

CONCLUSION
The growth of the microorganisms varies depending on the media. This demonstrates the ability of microorganisms to grow on different media.
