

Probability & Statistics (Probability)

Unit – I

Trial (or) Random Experiment : Consider an experiment which, though repeated any number of times under essentially identical conditions, does not give unique results but may result in any one of the several possible outcomes. These experiments are called as a Trial (or) Random Experiment. And the outcomes are known as Events.

Example: 1. Throwing a die is a trial & getting result (1 or 2 or 3 or 4 or 5 or 6) is an event.
2. Tossing a coin is a trial & getting result head or tail is an event.

Sample Space : The total number of possible outcomes in any trial is known as Sample space (or) Exhaustive Events & it is denoted by 'S'.

Example: 1. In tossing a coin, there are two exhaustive cases that are head & tail.
2. In throwing of a Die, there are six exhaustive cases. Since any one of the 6 faces 1, 2, 3, 4, 5, 6 may come on upper face.
3. In drawing two cards from a pack of 52 cards, the exhaustive number of cases is ${}^{52}C_2$.
4. In throwing of two dice, the exhaustive number of cases is $6^2 = 36$
5. In throwing of 'n' dice, the exhaustive number of cases is 6^n

Note : 1. An event $E_1 = S$, then the event E_1 is called as Sure (or) Certain Event.
2. If $E_2 = \Phi$, then the event E_2 is called as Impossible event.

Equally likely events : Outcomes of a trial are said to be equally likely if there is no reason to expect one of them in preference to others.

Example : 1. In tossing an un-biased coin, the two possible cases head or tail are equally likely events.
2. In throwing an un-biased die, all the six faces are equally likely events.

Mutually Exclusive Events : Events are said to be mutually exclusive or incompatible if the happening of any one of them precludes the happening of all others .
i.e., If no two or more of them can happen simultaneously in the same trial.

Example : 1. In tossing a coin the events Head & tail are mutually exclusive.
2. In throwing a die all 6 possible cases are mutually exclusive.

Note : If two events are mutually exclusive, then the sets are disjoint.
i.e., Let A & B are two non-empty sets are said to be mutually exclusive if $A \cap B = \Phi$

Favorable Events : The number of cases favorable to an event in a trial is the number of outcomes which entail the happening of the event.

Example: 1. In throwing of two dice, The number of favorable cases for getting the sum of the results of the two dice 5 is 4. { (1,4), (4,1), (2,3), (3,2) }
2. In drawing a card from a pack of 52 cards,
The number of favorable cases for drawing an Ace is 4.
The number of favorable cases for drawing a spade is 13.
The number of favorable cases for drawing a red card is 26.

Classical (or Mathematical) Definition of Probability :

If a trial results in 'n' exhaustive, mutually exclusive & equally likely cases and 'm' of them are favorable to happening of an event E, then the Probability of occurrence of event E is denoted by P(E) & is defined as

Simple Statistical Tests for Geography Danny McCarroll,2016-11-03 This book is aimed directly at students of geography particularly those who lack confidence in manipulating numbers The aim is not to teach the mathematics behind statistical tests but to focus on the logic so that students can choose the most appropriate tests apply them in the most convenient way and make sense of the results Introductory chapters explain how to use statistical methods and then the tests are arranged according to the type of data that they require Diagrams are used to guide students toward the most appropriate tests The focus is on nonparametric methods that make very few assumptions and are appropriate for the kinds of data that many students will collect Parametric methods including Student's t tests correlation and regression are also covered Although aimed directly at geography students at senior undergraduate and graduate level this book provides an accessible introduction to a wide range of statistical methods and will be of value to students and researchers in allied disciplines including Earth and environmental science and the social sciences

Rise of iWar Glenn J. Voelz,2018-01-16 During a decade of global counterterrorism operations and two extended counterinsurgency campaigns the United States was confronted with a new kind of adversary Without uniforms flags and formations the task of identifying and targeting these combatants represented an unprecedented operational challenge The existing Cold War era doctrinal methods were largely unsuited to the cyber warfare and terrorism that have evolved today Rise of iWar examines the doctrinal technical and bureaucratic innovations that evolved in response to these new operational challenges It discusses the transition from a conventionally focused Cold War era military approach to one optimized for the internet age focused on combating insurgency networks and conducting identity based targeting It also analyzes the policy decisions and strategic choices that caused these changes This study concludes with an in depth examination of emerging technologies that are likely to shape how this mode of warfare will be waged in the future and provides recommendations for how the US military should continue to adapt to be combat its foes in the digital age
