Creativity, Problem Solving, and Aesthetics in Engineering David Blockley,2020-02-29 This book illuminates what engineering is and how it relates to other disciplines such as art architecture law economics science technology and even religion The author explains from an intrinsic as well as descriptive perspective why engineering is essential for our collective well being and how like medicine it is undertaken by people and for people to improve the human condition He brings out the magic of engineering practice as well as addressing the darker

aspects such as warfare and the misuse of the internet. A too commonly held view assumes that the practice of engineers is a cold, purely quantitative and wholly technical enterprise of applying known science and devoid of creativity or aestheticism. In 2013 the United States National Academy of Engineering launched a campaign called Changing the Conversation Messages for Improving Public Understanding of Engineering with four messages to impart about engineers: that they make a world of difference, are creative problem solvers, that they help shape the future, and are essential to health, happiness, and safety. In this volume Professor Blockley incorporates these messages into an engaging exposition of engineering accomplishment in all of its evolving diversity, from the technician to the academic research engineer, illustrating the continuum of thinking and purpose from the fixer of the gas boiler to the designers of the A380 and the iPhone.
