The text deals with the application of chemical engineering principles to the design of chemical processes and equipment. The third edition retains its hallmark features of scope, clarity and practical emphasis while providing the latest US codes and standards including API, ASME and ISA design codes and ANSI standards as well as coverage of the latest aspects of process design, operations, safety, loss prevention, equipment selection and more. The text is designed for chemical and biochemical engineering students, senior undergraduate year plus appropriate for capstone design courses where taken and professionals in industry, chemical, process, biochemical, pharmaceutical, petrochemical sectors. Provides students with a text of unmatched relevance for chemical process and plant design courses and for the final year capstone design course. Written by practicing design engineers with extensive undergraduate teaching experience. Contains more than 100 typical industrial design projects drawn from a diverse range of process industries.

NEW TO THIS EDITION Includes new content covering food, pharmaceutical and biological processes and commonly used unit operations. Provides updates on plant and equipment costs, regulations and technical standards. Includes limited online access for students to Cost Engineering's Cleopatra Enterprise cost estimating software.

Real-time Iterative Learning Control Jian-Xin Xu, Sanjib K. Panda, Tong Heng Lee, 2008-12-12

Real time Iterative Learning Control demonstrates how the latest advances in iterative learning control (ILC) can be applied to a number of plants widely encountered in practice. The book gives a systematic introduction to real time ILC design and source of illustrative case studies for ILC problem solving. The fundamental concepts, schematics, configurations and generic guidelines for ILC design and implementation are enhanced by a well selected group of representative simple and easy to learn example applications. Key issues in ILC design and implementation in linear and nonlinear plants pervading mechatronics and batch processes are addressed in particular. ILC design in the continuous and discrete time domains, design in the frequency and time domains, design with problem specific performance objectives including robustness and optimality, design in a modular approach by integration with other control techniques and design by means of classical tools based on Bode plots and state space.
