**for Modularity** Ali K. Kamrani, Sa'ed M. Salhie, 2013-04-17 Modular products are products that fulfill various overall functions through the combination of distinct building blocks or modules in the sense that the overall function performed by the product can be divided into sub functions that can be implemented by different modules or components An important aspect of modular products is the creation of a basic core unit to which different components modules can be fitted thus enabling a variety of versions of the same module to be produced The core should have sufficient capacity to cope with all expected variations in performance and usage Components used in a modular product must have features that enable them to be coupled together to form a complex product Modularity will promote reduction in product development time customization and upgrades cost efficiencies due to amortization quality design standardization and reduction in order lead
