Abstracts generated through online search engines (e.g., Google Scholar) and reference lists of journal articles were used to identify relevant studies. Studies were then screened on the basis of abstracts, and relevant studies were included in the review. Studies were then screened on the basis of full-text articles. Studies were then screened on the basis of full-text articles.

Abstract. The purpose of this study was to determine whether there were differences in the prevalence of periodontitis between patients with type 2 diabetes mellitus (DM) and non-diabetic controls. A total of 60 patients with DM and 60 age- and sex-matched non-diabetic controls were recruited from a tertiary care hospital. All participants underwent a clinical examination of their periodontium by a single examiner. The prevalence of periodontitis was significantly higher in the DM group than in the control group ($p < .001$). The mean periodontal index score was significantly higher in the DM group than in the control group ($p < .001$). The mean plaque index score was also significantly higher in the DM group than in the control group ($p < .001$). The results of this study suggest that patients with DM have a higher prevalence of periodontitis than non-diabetic controls.

Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary middle-aged men. The study was conducted in a laboratory setting. The subjects were 15 sedentary middle-aged men (mean age 45.8 ± 3.2 years, range 35–55 years). The subjects were divided into two groups: a control group (n = 7) and a training group (n = 8). The control group performed no exercise, while the training group performed a 12-week training program consisting of three sessions per week of 30 minutes of moderate-intensity aerobic exercise. The HR and HRR were measured at rest and during maximal exercise at baseline and at the end of the 12-week training program. The results showed that the training group had a significant decrease in HR at rest and during maximal exercise, and a significant increase in HRR at rest and during maximal exercise, compared to the control group. The control group had no significant changes in HR and HRR. The results suggest that a 12-week training program can improve the cardiovascular fitness of sedentary middle-aged men.

Program Planning Guide Lethbridge:

Guide to Advanced Empirical Software Engineering Forrest Shull, Janice Singer, Dag I. K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering doubled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference Resources in Education ,2001 *The Biogas Handbook* Arthur Wellinger, Jerry D Murphy, David Baxter, 2013-02-19 With pressure increasing to utilise wastes and residues effectively and sustainably the production of biogas represents one of the most important routes towards reaching national and international renewable energy targets The biogas handbook Science production and applications provides a comprehensive and systematic guide to the development and deployment of biogas supply chains and technology Following a concise overview of biogas as an energy option part one explores biomass resources and fundamental science and engineering of biogas production including feedstock characterisation storage and pre treatment and yield optimisation Plant design engineering process optimisation and digestate utilisation are the focus of part two Topics considered include the engineering and process control of biogas plants methane emissions in biogas production and biogas digestate quality utilisation and land application Finally part three discusses international experience and best practice in biogas utilisation Biogas cleaning and upgrading to biomethane biomethane use as transport fuel and the generation of heat and power from biogas for stationary applications are all discussed The book concludes with a review of market development and biomethane certification schemes With its distinguished editors and international team of expert contributors The biogas handbook Science production and applications is a practical reference to biogas technology for process engineers manufacturers industrial chemists and biochemists scientists researchers and academics working in this field Provides a concise overview of biogas as an energy option Explores biomass resources for production Examines plant design and engineering and process optimisation *Parks* ,1981
