Hume's Natural Philosophy and Philosophy of Physical Science Matias Slavov, 2020-10-15 This book contextualizes David Hume's philosophy of physical science exploring both Hume's background in the history of early modern natural philosophy and its subsequent impact on the scientific tradition Drawing on Cartesian cosmology and Einstein's special relativity and taking in topics including experimentalism causation laws of nature metaphysics of forces mathematics relation to nature and the concepts of space and time this book deepens our understanding of Hume's relation to natural philosophy It does so in addition by situating Hume's thought within the context of other major philosophers and scientists including Descartes Locke Boyle Kant Newton and Leibniz Demonstrating above all Hume's understanding of the fluid relationship between philosophy and science Hume's Natural Philosophy and Philosophy of Physical Science will provide new insights for historians and philosophers of science *The Scientific Nature of Geomorphology* Colin E. Thorn, 1996 **International Handbook of**

the Religious, Moral and Spiritual Dimensions in Education Marian de Souza, Gloria Durka, Kathleen Engebretson, Robert Jackson, Andrew McGrady, 2007-06-04 Traditionally spirituality has resided and been contained within religious frameworks but while the links between the two areas are still acknowledged by many in the contemporary world spirituality is perceived by some as an aspect of human life that is distinct from religion Consequently many are searching for meaning within and without religious traditions today and seeking answers to ethical and moral questions that have been generated by the knowledge and technological explosion One outcome is the renewed interest in the religious spiritual and moral dimensions of education throughout the life cycle This International Handbook presents the research and professional practice of scholars who are daily engaged in the consideration of these dimensions in education The result is a collection of essays which reflects the discipline in all of its internationality as it is today Embedded within the chapters is also an agenda for the future where the religious moral and spiritual dimensions in education are proposed as an exciting and challenging way forward for educators at all levels in society As well it offers a vision for the emergence of a peaceful and just world

The Collected Works of Ken Wilber: Volume Eight Ken Wilber, 2000-05-16 Volume Eight of The Collected Works of Ken Wilber includes *In The Marriage of Sense and Soul Integrating Science and Religion* 1998 Wilber takes on the centuries old problem of the relationship between science and religion After surveying the world's great wisdom traditions and extracting features they all share he offers compelling arguments that not only are these compatible with scientific truth they also share a similar scientific method *One Taste The Journals of Ken Wilber* 1999 is a lively and entertaining glimpse into a year in the life of Ken Wilber as well as a thought provoking series of short essays on current trends in spirituality and psychology daily reflections meditation experiences and advice to spiritual seekers **Unifying Biology** Vassiliki Betty Smocovitis, 1996-12 *Unifying Biology* offers a historical reconstruction of one of the most important yet elusive episodes in the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin

proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices *Unifying Biology* offers not only its own new synthesis of the history of modern evolution but also a new way of doing history

Social Research Bruce Curtis, Cate Curtis, 2011-11-14 Original fresh and relevant this is a theoretically informed practical guide to researching social relations The text provides a mixed methods approach that challenges historical divisions between quantitative and qualitative research It adopts a multidisciplinary approach to social science research drawing from areas such as sociology social psychology and social anthropology Explicitly addressing the concerns of emergent researchers it provides both a how to account of social research and an understanding of the main factors that contextualize research by discussing why do social scientists work this way Throughout the twelve comprehensive chapters procedural how to accounts and contextual why do issues are usefully applied to major themes and substantive questions These key themes include 1 Research design 2 The practices of research and emergent researchers Beyond ontology epistemology and methodology 3 The impact of technology on research 4 Putting the research approach in context A superb teaching text this book will be relished by lecturers seeking an authoritative introduction to social research and by students who want an accessible enriching text to guide and inspire them

Cognitive Patterns in Science and Common Sense Theo A.F. Kuipers, Anne Ruth Mackor, 2023-03-13 This collection of 17 articles offers an overview of the philosophical activities of a group of philosophers who have been working at the Groningen University The meta methodological assumption which unifies the research of this group holds that there is a way to do philosophy which is a middle course between abstract normative philosophy of science and descriptive social studies of science On the one hand it is argued with social studies of science that philosophy should take notice of what scientists actually do On the other hand however it is claimed that philosophy can and should aim to reveal cognitive patterns in the processes and products of scientific and common sense

knowledge Since it is thought that those patterns can function as guidelines in new research and or in research in other disciplines philosophy can nevertheless hold on to the normative aim which is characteristic of classical philosophy of science Compared to this common assumption there is a diversity of subjects Some papers deal with general problems of science knowledge cognition and argumentation others with topics relating to foundational problems of particular sciences Therefore this volume is of interest to philosophers of science to philosophers of knowledge and argumentation in general to philosophers of mind as well as for scientists working in the physical and applied sciences biology psychology and economy who are interested in the foundations of their disciplines After a foreword by Leszek Nowak and a general introduction by the editors the book is divided into four parts with special introductions I Conceptual Analysis in Service of Various Research Programmes Henk Zandvoort Rein Vos Rick Looijen Gerben Stavenga Ren e Dalitz II The Logic of the Evaluation of Arguments Hypotheses Default Rules and Interesting Theorems Erik Krabbe Theo Kuipers Alfons Keupink Maarten Janssen Yao Hua Tan Bert Hamminga III Three Challenges to the Truth Approximation Programme Sjoerd Zwart Hinne Hettema Theo Kuipers Roberto Festa IV Explicating Psychological Intuitions Anne Ruth Mackor Jeanne Peijnenburg Lex Guichard Michel ter Hark The Groningen research group was recently qualified by an official international assessment committee as one of the best philosophy research groups in the Netherlands
