Liquid Rocket Engine Rene Nardi Rezende, 2018-11-15. The great engineering achievement required to overcome most of the challenges and obstacles that prevented turning rocket design from art into science took place in Europe and the United States between the 1930s and the 1950s. With the vast majority of the engines currently in operation developed in the pre computer age, there are new opportunities to update the design methodologies using technology that can now handle highly complex calculations fast. The space sector with an intense focus on efficiency is driving the need for updating, adapting or replacing the old modeling practices with new tools capable of reducing the volume of resources and the time required to complete simulations and analysis. This book presents an innovative parametric model applicable to the project of some elements of the liquid rocket thrust chamber with the level of detail and accuracy appropriate to the preliminary design phase. It addresses the operating characteristics and dimensioning of some thrust chamber elements through a set of equations and parameters which include thrust or propellant characteristics. The model degree of sophistication was adjusted to the requirements of the Project Life Cycle Phase B while also enabling quick analysis of new configurations from changes in initial project parameters.

Transformative Food Value Chains for Local Development Silke Maria Stöber, Wolfgang Bokelmann, Walter Odongo, Susanne Huyskens-Keil, Joanita Kataike, 2024-01-26. Understanding the capacity of food systems to undertake a transformation towards sustainability requires understanding how resources stream in and out of the systems. As complex socio-economic structures, food and agricultural value chains are important means for channeling resources, knowledge and agency in and out of rural areas. Given their prominent role on the development agendas, there is mixed evidence as to what

extent value chains and their actors can contribute to improving the livelihoods in poor rural and urban areas In order to shape sustainable living places transformative capacities and good governance are important mainstays Transformative agri food value chains are robust and often act as the sole transmission belt for returning capital resources and identity back into vulnerable areas Moreover domestic or regional chains may provide urban consumers with fresh quality food that also contributes to regional identity
