The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013) Michael Durant Thomas,2017-07-25 This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security Drawing on established securitisation frameworks Copenhagen and Paris Schools the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3 500 speeches policies and doctrinal articles since 2003 Importantly the author undertakes an examination of the intersection between the political and the military spheres probing the question of how ideology has influenced the military s uptake on the issue In this context the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper political issue and an unprecedented security threat A close examination of the key political actors their intent outlook and political mandate for broader climate action is therefore crucial to understanding the policy freedom and constraints within which

military leaders operate The book consists of eight chapters divided into four parts focusing on perspectives and methodological insights empirical case studies case study comparison and concluding observations Offers a rare and systematic examination of military climate policy by a military officer from Australia Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration Develops a unique method that quantifies climate security enabling a graphical representation for quick and ready reference ideally suited to policy makers

The End of Automobile Dependence Peter Newman, Jeffrey Kenworthy, 2015-08-11 Cities will continue to accommodate the automobile but when cities are built around them the quality of human and natural life declines Current trends show great promise for future urban mobility systems that enable freedom and connection but not dependence We are experiencing the phenomenon of peak car use in many global cities at the same time that urban rail is thriving central cities are revitalizing and suburban sprawl is reversing Walking and cycling are growing in many cities along with ubiquitous bike sharing schemes which have contributed to new investment and vitality in central cities including Melbourne Seattle Chicago and New York We are thus in a new era that has come much faster than global transportation experts Peter Newman and Jeffrey Kenworthy had predicted the end of automobile dependence In The End of Automobile Dependence Newman and Kenworthy look at how we can accelerate a planning approach to designing urban environments that can function reliably and conveniently on alternative modes with a refined and more civilized automobile playing a very much reduced and manageable role in urban transportation The authors examine the rise and fall of automobile dependence using updated data on 44 global cities to better understand how to facilitate and guide cities to the most productive and sustainable outcomes This is the final volume in a trilogy by Newman and Kenworthy on automobile dependence Cities and Automobile Dependence in 1989 and Sustainability and Cities Overcoming Automobile Dependence in 1999 Like all good trilogies this one shows the rise of an empire in this case that of the automobile the peak of its power and the decline of that empire

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Climate Change and People on the Move Fanny Thornton, 2018-10-24 This book applies a justice framework to analysis of the actual and potential role of international law with respect to people on the move in the context of anthropogenic climate change That people are affected by the impacts of climate change is no longer doubted including with implications for people movement migration displacement relocation etc Climate Change and People on the Move tackles unique questions concerning international responsibility for people movement arising from the inequities inherent to climate change Corrective and distributive justice provide the analytical backbone and are explored in a substantial theoretical chapter and then applied to subsequent contextual analysis Corrective justice supports analysis as to whether people movement in the climate change context could be conceived or framed as harm loss or damage which is compensable under international law either through fault centred regimes or no fault regimes i.e. insurance Distributive justice supports analysis as to whether such movement could be conceived or framed as a disproportionate burden either for those faced with movement or those faced with sheltering people on the move from which duties of redistribution may stem This book contributes to the growing scholarship and analysis concerning international law or governance and people movement in response to the impacts of climate change by investigating the bounds of the law where the phenomenon is viewed as one of injustice

Water and Energy Gustaf Olsson, 2015-06-14 Rapid and important developments in the area of energy-water nexus over the last two to three years have been significant. This new edition of *Water and Energy: Threats and Opportunities* is timely and continues to highlight the inextricable link between water and energy, providing an up-to-date overview of the subject with helpful detailed summaries of the technical literature. Water and Energy has been updated throughout, and major changes are new chapters on global warming and fossil fuels, including shale gas and fracking, the consequences of the Deepwater Horizon accident in the Mexican Gulf and the Niger Delta oil spills, new developments in hydropower, and continued competition between food, water, and energy. *Water and Energy: Threats and Opportunities 2e* creates an awareness of the important couplings between water and energy. It shows how energy is used in all the various water cycle operations and demonstrates how water is used and misused in all kinds of energy production and generation. Population increase, climate change, and an increasing competition between food and fuel production create enormous pressures on both water and energy availability. Since there is no replacement for water, water security looks more crucial than energy security. This is

true not only in developing countries but also in the most advanced countries For example the western parts of the USA suffer from water scarcity that provides a real security threat Part One of the book describes the water energy nexus the conflicts and competitions and the couplings between water security energy security and food security Part Two captures how climate change population increase and the growing food demand will have major impact on water availability in many countries in the world Part Three describes water for energy and how energy production and conversion depend on water availability As a consequence all planning has to take both water and energy into consideration The environmental including water consequences of oil and coal exploration and refining are huge in North America as well as in the rest of the world Furthermore oil leak accidents have hit America Africa Europe as well as Asia The consequences of hydropower are discussed and the competition between hydropower generation flood control and water storage is illustrated The importance of water for cooling thermal power plants is described as this was so tragically demonstrated at the Fukushima nuclear plants in 2011 Climate change will further emphasize the strong coupling between water availability and the operation of power plants Part Four analyses energy for water how water production and treatment depend on energy The book shows that a lot can be done to improve equipment develop processes and apply advanced monitoring and control to save energy for water operations Significant amounts of energy can be saved by better pumping the reduction of leakages controlled aeration in biological wastewater treatment more efficient biogas production and by improved desalination processes There are 3 PowerPoint presentations available for Water and Energy threats and opportunities 2e About the author Gustaf Olsson Professor Em in Industrial Automation Lund University Sweden Since 2006 Gustaf has been Professor Emeritus at Lund University Sweden Gustaf has devoted his research to control and automation in water systems electrical power systems and process industries From 2006 to 2008 he was part time professor in electrical power systems at Chalmers University of Technology Sweden He is guest professor at the Technical University of Malaysia UTM and at the Tsinghua University in Beijing China and he is an honorary faculty member of the Exeter University in UK Between 2005 and 2010 he was the editor in chief of the journals Water Science and Technology and Water Science and Technology Water Supply IWA Publishing From 2007 to 2010 he was a member of the IWA Board of Directors and in 2010 he received the IWA Publication Award In 2012 he was the awardee of an Honorary Doctor degree at UTM and an Honorary Membership of IWA Gustaf has guided 23 PhDs and a few hundred MSc students through their exams and has received the Lund University pedagogical award for distinguished achievements in the education The Lund University engineering students elected him as the teacher of the year He has spent extended periods as a guest professor and visiting researcher at universities and companies in the USA Australia and Japan and has been invited as a guest lecturer in 19 countries outside Sweden He has authored nine books published in English Russian German and Chinese and contributed with chapters in another 19 books as well as more than 170 scientific publications

People Forced to Flee United Nations High Commissioner for Refugees, 2022-02-16 People in danger have

received protection in communities beyond their own from the earliest times of recorded history The causes war conflict violence persecution natural disasters and climate change are as familiar to readers of the news as to students of the past It is 70 years since nations in the wake of World War II drew up the landmark 1951 Convention relating to the Status of Refugees *People Forced to Flee* marks this milestone It is the latest in a long line of publications stretching back to 1993 that were previously entitled *The State of the World's Refugees* The book traces the historic path that led to the 1951 Convention showing how history was made by taking the centuries old ideals of safety and solutions for refugees to global practice It maps its progress during which international protection has reached a much broader group of people than initially envisaged It examines international responses to forced displacement within borders as well as beyond them and the protection principles that apply to both It reviews where they have been used with consistency and success and where they have not At times the strength and resolve of the international community seems strong yet solutions and meaningful solidarity are often elusive Taking stock today at this important anniversary is all the more crucial as the world faces increasing forced displacement Most is experienced in low and middle income countries and persists for generations People forced to flee face barriers to improving their lives contributing to the communities in which they live and realizing solutions Everywhere an effective response depends on the commitment to international cooperation set down in the 1951 Convention a vision often compromised by efforts to minimize responsibilities There is growing recognition that doing better is a global imperative Humanitarian and development action has the potential to be transformational especially when grounded in the local context *People Forced to Flee* examines how and where increased development investments in education health and economic inclusion are helping to improve socioeconomic opportunities both for forcibly displaced persons and their hosts In 2018 the international community reached a Global Compact on Refugees for more equitable and sustainable responses It is receiving deeper support *People Forced to Flee* looks at whether that is enough for what could and should help define the next 70 years

Research Handbook on Climate Governance Karin Bäckstrand,Eva Lövbrand,2015-11-27 The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order In the post Copenhagen landscape the top down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors arenas and sites The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship

Thermal Stress Analysis of Composite Beams, Plates and Shells Erasmo Carrera,Fiorenzo A. Fazzolari,2016-11-25 *Thermal Stress Analysis of Composite Beams Plates and Shells Computational Modelling and Applications* presents classic and advanced thermal stress topics in a cutting edge review of this critical area tackling subjects that have little coverage in existing resources It includes discussions of complex problems

such as multi layered cases using modern advanced computational and vibrational methods Authors Carrera and Fazzolari begin with a review of the fundamentals of thermoelasticity and thermal stress analysis relating to advanced structures and the basic mechanics of beams plates and shells making the book a self contained reference More challenging topics are then addressed including anisotropic thermal stress structures static and dynamic responses of coupled and uncoupled thermoelastic problems thermal buckling and post buckling behavior of thermally loaded structures and thermal effects on panel flutter phenomena amongst others Provides an overview of critical thermal stress theory and its relation to beams plates and shells from classical concepts to the latest advanced theories Appeals to those studying thermoelasticity thermoelastics stress analysis multilayered structures computational methods buckling static response and dynamic response Includes the authors unified formulation UF theory along with cutting edge topics that receive little coverage in other references Covers metallic and composite structures including a complete analysis and sample problems of layered structures considering both mesh and meshless methods Presents a valuable resource for those working on thermal stress problems in mechanical civil and aerospace engineering settings
