NOVEMBER EXAMINATION PAPER 1: PHYSICS

SECTION A

QUESTION 1

Various options are provided as possible answers to the following questions. Choose the correct answer and write **ONLY** the LETTER (A-D) next to the QUESTION NUMBER in your answer book.

- 1.1 An example of a vector quantity:
- velocity
 - displacement
 - speed

- 1.2 A boy sits on a chair. Gravitational force pulls him down, the force that keeps him from moving down would be:
- friction
 - applied force
 - gravity
 - normal force
- 1.3 Two forces F_1 and F_2 have a net force of 120N if they act in the same direction and are balanced if they act in the opposite direction. The individual forces of F_1 and F_2 will be:
- 70N and 50N
 - 120N and 0N
 - 60N and 60N
 - 80N and 40N

Use the circuit diagram below to answer QUESTIONS 1.4 and 1.5

- 1.4 The voltage over the parallel resistors will be:
- 5V
 - 7V
 - 2V

- 10Ω
 - 4,67Ω
 - 5Ω
 - 6Ω
- 1.6 A box is pushed forward with a force of 200N but does not move. A possible reason for this is that:
- frictional force is also 200N
 - frictional force is more than 200N
 - frictional force is less than 200N
 - none of the above
- 1.7 The diagram below shows a coil and a magnet with a pole P. A magnetic field is induced in the coil due to the motion of the magnet.

Multiple Representations in Physics Education David F. Treagust, Reinders Duit, Hans E. Fischer, 2017-07-24 This volume is important because despite various external representations such as analogies metaphors and visualizations being commonly used by physics teachers educators and researchers the notion of using the pedagogical functions of multiple representations to support teaching and learning is still a gap in physics education The research presented in the three sections of the book is introduced by descriptions of various psychological theories that are applied in different ways for designing physics teaching and learning in classroom settings The following chapters of the book illustrate teaching and learning with respect to applying specific physics multiple representations in different levels of the education system and in different physics topics using analogies and models different modes and in reasoning and representational competence When multiple representations are used in physics for teaching the expectation is that they should be successful To ensure this is the case the implementation of representations should consider design principles for using multiple representations Investigations regarding their effect on classroom communication as well as on the learning results in all levels of schooling and for different topics of physics are reported The book is intended for physics educators and their students at universities and for physics teachers in schools to apply multiple representations in physics in a productive way *Engineering Physics (with Practicals) (GTU), 8th Edition* G. Vijayakumari, Engineering Physics has been specifically designed and written to meet the requirements of the engineering students of GTU All the topics and sub topics are neatly arranged for the students A number of assignment problems along with questions and answers have also been provided MCQs for the bridge course have been designed in such a way that the students can recollect every concept that they have read and apply easily during the examination **KEY FEATURES** Detailed discussion of every topic from elementary to comprehensive level with several worked out examples A section on practicals Solved Question Papers Dec 2013 and June 2014 As per the syllabus for 2013 14

Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 *Physics and Literature* is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how

science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics

Accidental Conflict Stephen Roach, 2022-11-08 The misguided forces driving conflict escalation between America and China and the path to a new relationship A timely fluid readable assessment of a testy and rapidly changing global relationship Kirkus Reviews starred review In the short span of four years America and China have entered a trade war a tech war and a new Cold War This conflict between the world's two most powerful nations wouldn't have happened were it not for an unnecessary clash of false narratives America falsely blames its trade and technology threats on China yet overlooks its shaky saving foundation China falsely blames its growth challenges on America's alleged containment of market based socialism ignoring its failed economic rebalancing In a hard hitting analysis of both nations economies politics and policies Stephen Roach argues that much of the rhetoric on both sides is dangerously misguided amplified by information distortion and more a reflection of each nation's fears and vulnerabilities than a credible assessment of the risks they face Outlining the disastrous toll of conflict escalation between China and America Roach offers a new road map to restoring a mutually advantageous relationship

Einstein's Entanglement W. M. Stuckey, Michael Silberstein, Timothy McDevitt, 2024-10-30 Einstein introduced quantum entanglement in 1935 and referred to it as spooky actions at a distance because it seemed to conflict with his theory of special relativity Today some refer to it as the greatest mystery in physics and the 2022 Nobel Prize in Physics was even awarded for experimental confirmation of the spookiness While the mystery is experimentally well established its solution remains elusive because it is commonly believed that quantum entanglement entails that quantum mechanics is incomplete that the world works according to spooky actions at a distance that causes from the future create effects in the present that there is superdeterministic causal control of experimental procedures that people can correctly disagree on the outcome of one and the same experiment and that a single experimental measurement can produce all possible outcomes In this book a rigorous solution to the mystery of quantum entanglement is provided that entails none of those things The key to this seemingly impossible feat is to use Einstein's own language a principle explanation that foregoes the need for any constructive explanation of quantum entanglement such as those listed above Ironically the proposed principle explanation is Einstein's own relativity principle as grounded in quantum information theory So contrary to popular belief quantum mechanics and special relativity are far from inconsistent as both are a consequence of the exact same relativity principle

Development Of Mathematics Between The World Wars, The: Case Studies, Examples And Analyses Martina Becvarova, 2021-05-14 The Development of Mathematics Between the World Wars traces the transformation of scientific life within mathematical communities during the interwar period in Central and Eastern Europe specifically in Germany Russia Poland Hungary and Czechoslovakia Throughout the book in depth mathematical analyses and examples are included for the benefit of the reader World War I heavily affected academic life In European countries many talented researchers and students were killed in action and scientific activities were halted to

resume only in the postwar years However this inhibition turned out to be a catalyst for the birth of a new generation of mathematicians for the emergence of new ideas and theories and for the surprising creation of new and outstanding scientific schools The final four chapters are not restricted to Central and Eastern Europe and deal with the development of mathematics between World War I and World War II After describing the general state of mathematics at the end of the 19th century and the first third of the 20th century three case studies dealing with selected mathematical disciplines are presented set theory potential theory combinatorics in a way accessible to a broad audience of mathematicians as well as historians of mathematics
