

Images in Curved Mirrors:

Name: Answers

1. Two slightly curved mirrors are shown below. From the clues given, determine if they are convex (diverging) or concave (converging) mirrors. Give one reason to support your answer.

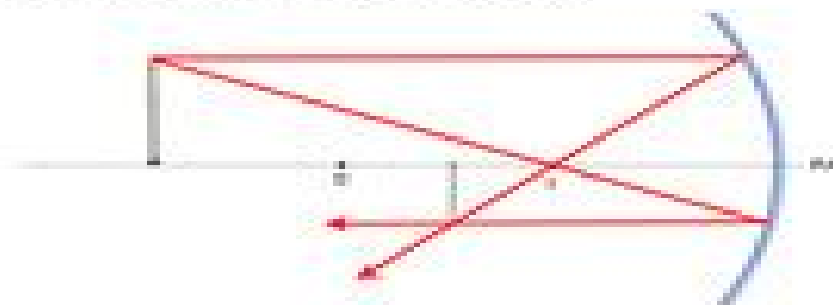

larger image (5x), erect, virtual, can only be a converging mirror.

for a curved mirror, images are smaller, and upright only in a convex mirror.²

²The warning refers to the image being smaller than expected in a plane mirror, like the one often on the driver's side. This is because it's a convex mirror (diverging rays), giving it a wide-angle view. These mirrors only produce smaller, upright, virtual images as shown.

2. Locate the focal point in the diagram below and the image of the pen. Describe the image characteristics (SALT). How many times smaller or larger is the image?

S= smaller

A= inverted

L= between C & F

T= real

3. A girl looks in a make-up mirror as shown. Locate the focal point. Locate the image and describe its characteristics (SALT). How many times larger or smaller is the image of her eye?

(*Note: $f=c/2$)

S= larger

A= upright

L= beyond mirror

T= virtual

$$\text{magnification} = 3.0\text{cm}/1.5\text{cm} = 2x$$
