

EXAMINE THE PIGEON'S HEAD

1. Examine the pigeon's head. Look closely at the eye, with its moveable upper and lower lid.
2. Gently pull the lids back so that you can see the **NICTITATING MEMBRANE** in the corner of the eye. At the upper end of the beak is a slit-like nasal opening. Just behind this opening, locate a white structure called the **CERE**, which is at the juncture of the beak and the head. Just below and slightly behind the eye, look for the external ear opening.

Morphological Features:

1. **Bill length (culmen):** The distance from the tip of the upper mandible to the end of the culmen at its intersection with the cere, or forehead.
2. **Wing Length:** The wing chord is measured from the bend of the wing (wrist) to the tip of the longest primary using dividers. The flattened wing length is measured by pressing the wing down on a ruler from the wrist to the tip of the longest primary.
3. **Tail Length:** The distance from the tip of the longest **RECTRIX** (longest tail feather) to the point where it emerges from the skin.
4. **Tarsus length:** The distance from the heel joint (tibiotarsus-tarsometatarsal joint) to the point of the tarsometatarsal joint at the base of the middle anterior toe.
5. **Total length:** The distance from the tip of the bill to the tip of the longest rectrix when the bird is placed on its back with the head tipped back parallel to the table surface. Should be reported for fresh specimens only, not museum specimens.

Field is intended as an aid to ornithological study at the college or university level. Students who lack the background knowledge usually acquired during a course in general zoology or biology should keep it handy for ready reference. A standard elementary text on the subject. This book contains extensive material for purely informational reading, possibly enough to supplant the need of an additional textbook. Its principal purpose still complies with the title of its predecessors for it is essentially a manual to guide and assist the student in direct observations. All twenty sections except the last, 'The Origin, Evolution and Decrease of Birds', suggest methods and provide instructions for studies and all conclude with an extensive list of references frequently annotated for further information. The twenty sections of the book can be taken up in almost any order and some may be omitted without affecting the instructional value of the others. A feature of this new edition is an introduction to birds and ornithology intended for reading at the beginning of a course. The purpose is twofold: to show the significance of birds for study and to give an overall preview of ornithology, the subject with emphasis on its wide scope, how it is studied, and some of the continuing and exciting opportunities that it offers for investigation.
