Saunders, Katharina Perch-Nielsen, 1989-05-25 This comprehensive synthesis of our knowledge of the biostratigraphy of marine plankton is the work of an international team of eighteen authors It covers all the major fossil groups that can be used to date sediments and rocks in the time interval Late Mesozoic to Holocene Altogether more than 3200 taxa are considered almost all of which are illustrated and depicted on range charts making the book a valuable work of reference in the earth sciences For ease of reference by specialists interested in either calcareous or non calcareous microfossils the original work is now divided into two independent volumes Volume I covers the calcareous microfossils and includes planktic foraminifers calcareous nannofossils and calpionellids Plankton Stratigraphy Hans M. Marine Protists Susumu Ohtsuka, Toshinobu Suzaki, Takeo Horiguchi, Noritoshi Suzuki, Fabrice Not, 2015-09-28 This comprehensive book provides a unique overview of advances in the biology and ecology of marine protists Nowadays marine protistology is a hot spot in science to disclose life phenomena using the latest techniques Although many protistological textbooks deal with the cytology genetics ecology and pathology of specific organisms none keeps up with the quick pace of new discoveries on the diversity and dynamics of marine protists in general The book *Marine Protists Diversity and Dynamics* gives an overview of current research on the phylogeny cytology genomics biology ecology fisheries applied sciences geology and pathology of marine free living and symbiotic protists Poorly known but ecologically important protists such as labyrinthulids and apistomes ciliates are also presented in detail Special attention is paid to complex interactions between marine protists and other organisms including human beings An understanding of the ecological roles of marine protists is essential for conservation of nature and human welfare This book will be of great interest not only to scientists and students

but also to a larger audience to give a better understanding of protists diverse roles in marine ecosystems

A revised correlation of Tertiary rocks in the British Isles and adjacent areas of NW Europe C. King, 2016-01-05 This Special Report comprehensively describes the stratigraphy and correlation of the Tertiary Paleogene Neogene rocks of NW Europe and the adjacent Atlantic Ocean and is the summation of fifty years of research on Tertiary sediments by Chris King His book is essential reading for all geologists who deal with Tertiary rocks across NW Europe including those in the petroleum industry and geotechnical services as well as academic stratigraphers and palaeontologists Introductory sections on chronostratigraphy biostratigraphy and other methods of dating and correlation are followed by a regional summary of Tertiary sedimentary basins and their framework and an introduction to Tertiary igneous rocks The third and largest segment comprises the regional stratigraphic summaries Regions covered are the North Sea Basin onshore areas of southern England and the eastern English Channel area the North Atlantic margins including non marine basins in the Irish Sea and elsewhere and the Paleogene igneous rocks of Scotland

Retrograde Evolution During Major Extinction Crises Jean Guex, 2016-02-05 This book is the first of its kind providing in depth analysis of the retrograde evolution occurring during major extinction periods The text offers a non strictly adaptative explanation of repetition of phyla after the major extinctions utilizing a study of seven phylogenetically distinct groups This opens a new experimental field in evolutionary biology with the possibility of reconstructing ancestral forms in lab by applying artificial stresses

Cretaceous Project 200, Volume 2: Regional Studies M.B. Hart, S.J. Batenburg, B.T. Huber, G.D. Price, N. Thibault, M. Wagreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d Omalius d Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers from an exceptionally wide geographical area that reflects the varied geological features of Cretaceous strata and the enclosed faunas and floras There are geological accounts of areas from the Arctic to the Antarctic Peninsula onshore and offshore environments as well as some terrestrial environments with newly described floras and faunas The application of stable isotope geochemistry to stratigraphical problems and the identification of cyclostratigraphy features quite prominently in many of the areas described

From Greenhouse to Icehouse Donald R. Prothero, Linda C. Ivany, Elizabeth A. Nesbitt, 2003 The marine Eocene Oligocene transition of 34 million years ago was a critical turning point in Earth s climatic history when the warm high diversity greenhouse world of the early Eocene ceded to the glacial icehouse conditions of the early Oligocene This book surveys the advances in stratigraphic and paleontological research and isotopic analysis made since 1989 in regard to marine deposits around the world In particular it summarizes the high resolution details of the so called doubthouse interval roughly 45 to 34 million years ago which is critical to testing climatic and evolutionary hypotheses

about the Eocene deterioration The authors goals are to discuss the latest information concerning climatic and oceanographic change associated with this transition and to examine geographic and taxonomic patterns in biotic turnover that provide clues about where when and how fast these environmental changes happened They address a range of topics including the tectonic and paleogeographic setting of the Paleogene specific issues related to the stratigraphy of shelf deposits advances in recognizing and correlating boundary sections trends in the expression of climate change and patterns of faunal and floral turnover In the process they produce a valuable synthesis of patterns of change by latitude and environment
