Plants and Snails Gizmo

Overview

You will study the production and use of gases by plants and animals by measuring the oxygen (O_2) and carbon dioxide (CO_2) levels in a test tube containing snails and elodea (a type of plant) in both light and dark conditions.

Prior Knowledge Questions

Question/Prompt	Your Response
1. What important gas do we take in when we breathe?	Oxygen.
2. Why don't we run out of the important gases that we need to stay alive?	We breathe oxygen in and out of our bodies.

Directions

Part A: Introduction

1. Open a new tab or window. Go to the [Plants and Snails Gizmo](#).
2. In the Gizmo, each of the test tubes contains water and a small amount of **bromothymol blue (BTB)**. BTB is a chemical indicator. An indicator changes color when the chemicals in the water change.

Question/Prompt	Your Response
With the lights set to on, drag a snail into one test tube and a plant into another. Press Play ().	The snail tube turned yellow and the plant tube turned blue.
3. After 24 hours, what is the color of each tube?	
Select Show O_2 and CO_2 values in the lower left hand corner of the screen. Place the O_2/CO_2 probe in the first tube then move it to the second tube. The probe shows the levels of two gases, O_2 and CO_2 , in the tubes. We call these amounts the <i>gas levels</i> .	
4. When the water turns blue, which gas is most common?	Oxygen
5. When the water turns yellow, which gas is most common?	Carbon Dioxide
6. What does it tell you when the water is green?	Both oxygen and carbon dioxide levels are even (6.0)
7. Describe the carbon dioxide-oxygen cycle by completing the sentences:	Animals breathe in [oxygen] and breathe out [carbon dioxide].

Challenging Science Standards Charles R. Ault Jr.,2015-08-06 For several decades educators have struggled to identify the attributes all sciences have in common In the popular mind this effort constitutes the importance of teaching the scientific method In the policy maker s world this pursuit yields standards for all Americans that unify the sciences For teachers the quest for unity has typically meant teaching science as process However a curriculum that prioritizes what all sciences have in common obscures their vital differences For example studying landslides is very different from doing x ray diffraction climate science is unlike medical research Na ve ideas about scientific unity impoverish the public s ability to evaluate scientific enterprises Challenging Science Standards voices skepticism towards the quest for unity Through analyses of disciplinary knowledge school curricula and classroom learning the book uncovers flaws in the unifying dimensions of the science standards It proposes respect for disciplinary diversity and attention to questions of value in choosing what science to teach Illuminated by vignettes of children and adolescents studying topics ranging from snail populations to horse fossils Challenging Science Standards proposes promising remedies

Tang,Mika Sillanpää,2018-10-16 The important resource that explores the twelve design principles of sustainable environmental engineering Sustainable Environmental Engineering SEE is to research design and build Environmental Engineering Infrastructure System EEIS in harmony with nature using life cycle cost analysis and benefit analysis and life cycle assessment and to protect human health and environments at minimal cost The foundations of the SEE are the twelve design principles TDPs with three specific rules for each principle The TDPs attempt to transform how environmental engineering could be taught by prioritizing six design hierarchies through six different dimensions Six design hierarchies are prevention recovery separation treatment remediation and optimization Six dimensions are integrated system material economy reliability on spatial scale resiliency on temporal scale and cost effectiveness In addition the authors two experts in the field introduce major computer packages that are useful to solve real environmental engineering design problems The text presents how specific environmental engineering issues could be identified and prioritized under climate change through quantification of air water and soil quality indexes For water pollution control eight innovative technologies which are critical in the paradigm shift from the conventional environmental engineering design to water resource recovery facility WRRF are examined in detail These new processes include UV

disinfection membrane separation technologies Anammox membrane biological reactor struvite precipitation Fenton process photocatalytic oxidation of organic pollutants as well as green infrastructure Computer tools are provided to facilitate life cycle cost and benefit analysis of WRRF This important resource Includes statistical analysis of engineering design parameters using Statistical Package for the Social Sciences SPSS Presents Monte Carlos simulation using Crystal ball to quantify uncertainty and sensitivity of design parameters Contains design methods of new energy materials processes products and system to achieve energy positive WRRF that are illustrated with Matlab Provides information on life cycle costs in terms of capital and operation for different processes using MatLab Written for senior or graduates in environmental or chemical engineering Sustainable Environmental Engineering defines and illustrates the TDPs of SEE Undergraduate graduate and engineers should find the computer codes are useful in their EEIS design The exercise at the end of each chapter encourages students to identify EEI engineering problems in their own city and find creative solutions by applying the TDPs For more information please visit www.tang.fiu.edu
