Phonetic knowledge can be assessed in three ways. First, phonograms, or letter-sets in American phonetic alphabets, or letter-sets in other alphabets, like Cyrillic, may be assigned the value of phonemes. It is important to understand, however, that these letters themselves are subject also to higher patterns that make impossible their phonemic interpretation. For example, the Cyrillic letter *ш* (shch) is phonemic in Russian, but in English it is not. Second, phonemes themselves may be assigned the value of phonemes. This is possible only if the phonemes themselves are not subject to higher patterns that make impossible their phonemic interpretation. For example, the phoneme /t/ is phonemic in English, but in Russian it is not. Third, phonemes themselves may be assigned the value of phonemes. This is possible only if the phonemes themselves are not subject to higher patterns that make impossible their phonemic interpretation. For example, the phoneme /t/ is phonemic in English, but in Russian it is not.
