 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathe matics It is a translation with
 updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing
 House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There
 are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main
 directions in mathematics where a rather fine subdivi sion has been used The main requirement for these articles has been
 that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they
 should be maximally accessible On the whole these articles should be understandable to mathematics students in their first
 specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other
 domains of science en gineers and teachers of mathematics These articles treat their material at a fairly general level and
 aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain
 background and motivation rather than precise statements of precise theorems with detailed definitions and technical details
 on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete
 problems results and techniques **ECSM2014-Proceedings of the European Conference on Social Media** Asher
