Geology coalesced as a discipline in the early part of the nineteenth century with the coming together of many strands of investigation and thought The theme of experimentation and or instrument aided observation is absent from most recent accounts of that time which rely on an admixture of theory and field observations informed by close examination of minerals James Hutton emerged as the person who had it right with suggestion of a central heat source for Earth while Abraham Gottlob Werner and his Neptunist supporters were derided as being blinded by overarching belief as opposed to sober application of observed facts However despite several claims that Hutton had won the day primary literature from both England and the Continent reveals that the question was by no means settled for decades after Hutton derided information derived from looking into a little crucible This Special Paper makes the case that it was just those parameters of heat pressure solution and composition discovered in the laboratory that prevented resolution of the overriding questions about rock origin *Twentieth Century Interpretations of The Crucible* John H. Conflict and Compromise Roger L. Ransom,1989-09-29 In this book Professor Roger Ransom examines the economic and political factors that led to the attempt by Southerners to dissolve the Union in 1860 and the equally determined effort of Northerners to preserve it Ransom argues that the system of capitalist slavery in the South not only caused the Civil War by producing tensions that could not be resolved by compromise it also played a crucial role in the outcome of that war by crippling the southern war effort at the same time that emancipation became a unifying issue for the North Ransom also carefully examines the impact that four years of war and the emancipation of slaves had both on the defeated South and the victorious North From publisher s description **A New English Dictionary on Historical Principles** James Augustus
