

# Tiny Homes

Over the past 70 to 80 years, the household lifestyles of middle class Americans have been getting increasingly more extravagant. In 1949, the average size of a single-family home was 909 square feet. By 2021, the average size of an American single family home had reached 2,480 square feet! Not only do some people find the size of these homes excessive; for many they are also unaffordable. For most people, purchasing a home in America today comes with a mountain of debt, a sinkhole of interest, and at least 30 years of working to pay for it all, often in a job that homeowner doesn't even really want to be doing. One form of resistance against this lifestyle which began in the 1970s has become known as the Tiny House Movement.

A tiny house is a dwelling space that averages between 160 and 200 square feet. Tiny houses are small enough and light enough to be towed by a pickup truck, yet they still contain areas for cooking, living, and sleeping, as well as a bathroom. Today, singles, couples, and even families call tiny houses their home.

They not only have the advantage of being portable. They are also significantly less expensive than a conventional single family home. Depending on how handy you are with construction and the availability of materials, a tiny house can be built for as little as \$8,000, though they typically cost the new homeowner between \$30,000 and \$60,000. But even \$60,000 is a fraction of what people are paying for single family real estate in many areas of the country.

The decision to go tiny requires some radical self-evaluation. What do people really need to live comfortably? In many areas of the world, people still live far simpler lives than those lived by Americans, who are continually assaulted on television, radio, and social media with advertisements designed to make them think they need more and more personal belongings to be happy. In reality, the basic needs of a human

The Use and Abuse of EFL Dictionaries Hilary Nesi, 2012-02-14 The book begins with a review of research into dictionary use A number of experimental design problems are discussed in particular the unreliability of questionnaire responses and

the need for detailed accounts of individual dictionary consultations whilst sampling in numbers sufficient to represent specified populations The experiments reported in subsequent chapters investigate issues raised in the review The first two studies find that dictionary use during a reading comprehension test affected completion speed but not test scores The apparent failure of dictionary use to improve comprehension is attributed to the test itself the dictionaries and the users choice of look up words The ability of users to interpret dictionary entries is investigated in three further studies which use computers to gather data on large numbers of individual consultations The findings indicate that there is little difference between three major EFL dictionaries in terms of speed of consultation and overall productive success They also indicate that Malaysian ESL subjects who have higher vocabulary scores are slower in their reading and less successful in their interpretation of entries than Portuguese EFL subjects Finally the findings suggest that overall productive success is unaffected by the presence or absence of examples The experimental findings lead to the conclusion that dictionary consultation is a process in which users match pre existing beliefs about word meaning and behaviour against segments in the dictionary entry Such segments are often selected because they are familiar sounding and conceptually accessible but may contain only incomplete or non essential information Where pre existing beliefs and dictionary information conflict dictionary information is sometimes overridden Thus word knowledge acquired from a single consultation is often insufficient to ensure productive success Although it is probably inevitable that word knowledge will be acquired slowly through multiple encounters modifications to the dictionary entry and the training of users might help to avoid serious misinterpretation of dictionary information
