River Flow 2016 George Constantinescu, Marcelo Garcia, Dan Hanes, 2016-06-22 Understanding and being able to predict fluvial processes is one of

the biggest challenges for hydraulics and environmental engineers hydrologists and other scientists interested in preserving and restoring the diverse functions of rivers The interactions among flow turbulence vegetation macroinvertebrates and other organisms as well as the transport and retention of particulate matter have important consequences on the ecological health of rivers Managing rivers in an ecologically friendly way is a major component of sustainable engineering design maintenance and restoration of ecological habitats To address these challenges a major focus of River Flow 2016 was to highlight the latest advances in experimental computational and theoretical approaches that can be used to deepen our understanding and capacity to predict flow and the associated fluid driven ecological processes anthropogenic influences sediment transport and morphodynamic processes River Flow 2016 was organized under the auspices of the Committee for Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR Since its first edition in 2002 the River Flow conference series has become the main international event focusing on river hydrodynamics sediment transport river engineering and restoration Some of the highlights of the 8th International Conference on Fluvial Hydraulics were to focus on inter disciplinary research involving among others ecological and biological aspects relevant to river flows and processes and to emphasize broader themes dealing with river sustainability River Flow 2016 extended abstract book 854 pages full paper CD ROM 2436 pages contains the contributions presented during the regular sessions covering the main conference themes and the special sessions focusing on specific hot topics of river flow research and will be of interest to academics interested in hydraulics hydrology and environmental engineering

Iran's Nuclear Program

Farhad Rezaei, 2017-01-05 This book presents the first full and systematic account of Iran's nuclear program from 1979 to 2015 Throughout this time foreign policy makers intelligence experts and scholars on the subject have repeatedly failed to understand the internal dynamics behind Iran's nuclear project and have underestimated the depth of the regime's commitment to develop nuclear weapons The author presents an account of little understood episodes in the history of the nuclear project including an analysis of the decision making process of the nuclear sanctum A full account is given of the organizations that ran the project and a listing of the suppliers that made the project possible Finally the book offers a detailed analysis of the international sanctions placed on Iran including the induced anomie and legitimacy crisis which expedited the decision to rollback

Life by Algorithms

Catherine Besteman, Hugh Gusterson, 2019-05-23 Essays on the downsides dysfunctions and dangers of automated decision making An excellent survey of the algorithmically managed life Choice The phone systems that businesses use to screen calls The link between student standardized test scores and public schools access to resources The algorithms that regulate patient diagnoses and reimbursements to doctors The impenetrable corporate bureaucracy that can drive customers in need of help up the wall or drive them to suicide The storage sorting and analysis of massive amounts of information have enabled the automation of decision making at an unprecedented level Meanwhile computers have offered a model of cognition that increasingly shapes our approach to the world The proliferation

of robo-processes is the result as editors Catherine Besteman and Hugh Gusterson observe in this rich and wide ranging volume which features contributions from a distinguished cast of scholars in anthropology communications international studies and political science Though automatic processes are designed to be engines of rational systems the stories in *Life by Algorithms* reveal how they can in fact produce absurd inflexible or even dangerous outcomes Joining the call for algorithmic transparency the contributors bring exceptional sensitivity to everyday sociality into their critique to better understand how the perils of modern technology affect finance medicine education housing the workplace food production public space and emotions not as separate problems but as linked manifestations of a deeper defect in the fundamental ordering of our society The Machine Stops E M Forster's 1909 science fiction story tells the tale of a human society collapsing when the technology upon which it has become dependent fails Think of this volume as *The Machine Starts* a collection of unsettling ethnographic accounts of the rise of algorithmic governance A necessary and sobering call to arms Stefan Helmreich Massachusetts Institute of Technology Contributors include Catherine Besteman Alex Blanchette Robert W Gehl Hugh Gusterson Catherine Lutz Ann Lutz Fernandez Joseph Masco Sally Engle Merry Keesha M Middlemass Noelle Stout Susan J Terrio

Integrating Human Factors Methods and Systems Thinking for Transport Analysis and Design Gemma J. M. Read, Vanessa Beanland, Michael G. Lenné, Neville A. Stanton, Paul M. Salmon, 2017-07-26 Governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes Human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures This book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems The book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process The practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect The final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach *The Extinction of Experience* Christine Rosen, 2024-09-10 An Esquire Best Book of 2024 A reflective original invitation to recover and cultivate the human experiences that have atrophied in our virtual world We embraced the mediated life from Facetune and Venmo to meme culture and the Metaverse because these technologies offer novelty and convenience But they also transform our sense of self and warp the boundaries between virtual and real What are the costs Who are we in a disembodied world In *The Extinction of Experience* Christine Rosen investigates the cultural and emotional shifts that accompany our embrace of

technology In warm philosophical prose Rosen reveals key human experiences at risk of going extinct including face to face communication sense of place authentic emotion and even boredom Considering cultural trends like TikTok challenges and mukbang and politically unsettling phenomena like sociometric trackers and online conspiracy culture Rosen exposes an unprecedented shift in the human condition one that habituates us to alienation and control To recover our humanity and come back to the real world we must reclaim serendipity community patience and risk **American Universities and Colleges** ,2014-10-08 No detailed description available for American Universities and Colleges
