Satellite Gravity and the Geosphere National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Earth Gravity from Space, 1997-09-02 For the past three decades it has been possible to measure the earth's static gravity from satellites Such measurements have been used to address many important scientific problems including the earth's internal structure and geologically slow processes like mantle convection In principle it is possible to resolve the time varying

component of the gravity field by improving the accuracy of satellite gravity measurements These temporal variations are caused by dynamic processes that change the mass distribution in the earth oceans and atmosphere Acquisition of improved time varying gravity data would open a new class of important scientific problems to analysis including crustal motions associated with earthquakes and changes in groundwater levels ice dynamics sea level changes and atmospheric and oceanic circulation patterns This book evaluates the potential for using satellite technologies to measure the time varying component of the gravity field and assess the utility of these data for addressing problems of interest to the earth sciences natural hazards and resource communities *Biodiversity, Connectivity and Ecosystem Function Across the Clarion-Clipperton Zone: A Regional Synthesis for an Area Targeted for Nodule Mining* Craig Randall Smith, Adrian Glover, Malcolm Ross Clark, Erica Goetze, Kerry Howell, 2022-01-21
